

**SCIENTIFIC COMMITTEE
SEVENTH REGULAR SESSION**

9-17 August 2011
Pohnpei, Federated States of Micronesia

SOUTH PACIFIC SWORDISH DATA AVAILABLE FOR STOCK ASSESSMENTS

WCPFC-SC7-2011/ST IP-04

Peter Williams¹, Shelton Harley¹ and Robert Campbell²

¹ Oceanic Fisheries Programme (OFP), Secretariat of the Pacific Community (SPC), Noumea, New Caledonia.

² CSIRO Marine and Atmospheric Research, Aspendale, Australia

1. INTRODUCTION

The Sixth WCPFC Scientific Committee (SC6) meeting, held in Nuku’alofa, Tonga, noted in respect to future assessments

“353. *For future assessments:*

...
iii. The SC recommends that a review of the data holdings relating to swordfish in the South Pacific together with the resolution of any outstanding data issues be undertaken during 2011 and reported to SC7. If the data for the assessments are deemed sufficient, SC7 can make a recommendation to conduct the swordfish assessment during 2012, with presentation to SC8.”

This document provides a breakdown (inventory) of South Pacific swordfish data available to the WCPFC to conduct a stock assessment and updates the previous data summary provided in Campbell (2008). The full inventory is provided in Annex 1 and key features of these data and important data gaps are described below. We also indicate additional sources of data outside of WCPFC holdings, which are currently held by SPC, which could be of use for a stock assessment.

2. SUMMARY OF WCPFC HOLDINGS

2.1 CATCHES

From 1970 to the late 1990s swordfish catches slowly increased from 2,500mt to 5,000 mt which a couple of years slightly higher (Figure 1). With the development of the Australian fishery at that time and then the New Zealand fishery shortly after catches increased to just under 10,000mt by 2003. In 2004 the Spanish fleet began to operate in the south Pacific and catches jumped dramatically to around 15,000 mt. This later jump was also due, to a much lesser extent, by an increase in catches from Chinese-Taipei.

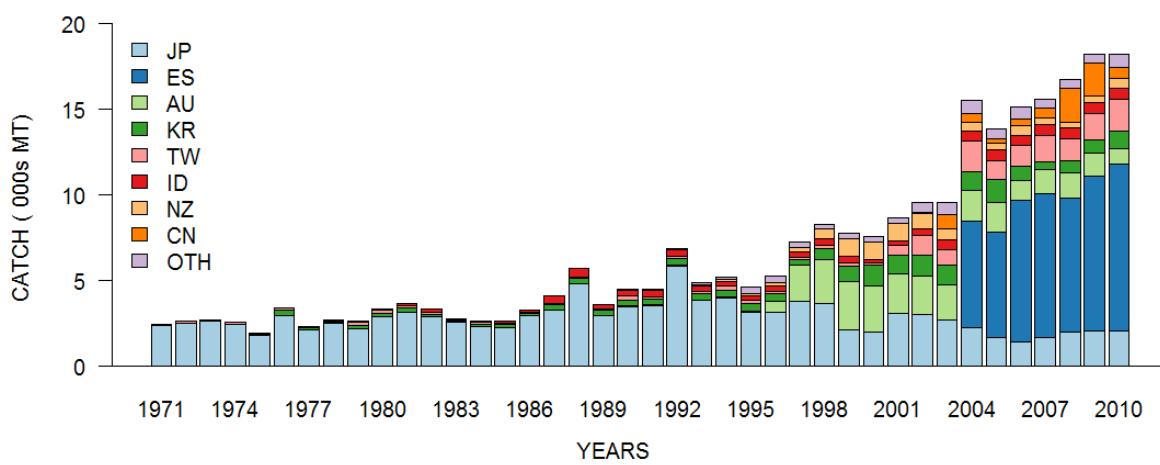

Figure 1: South Pacific swordfish catches (MT) by flag from 1970 to 2010.

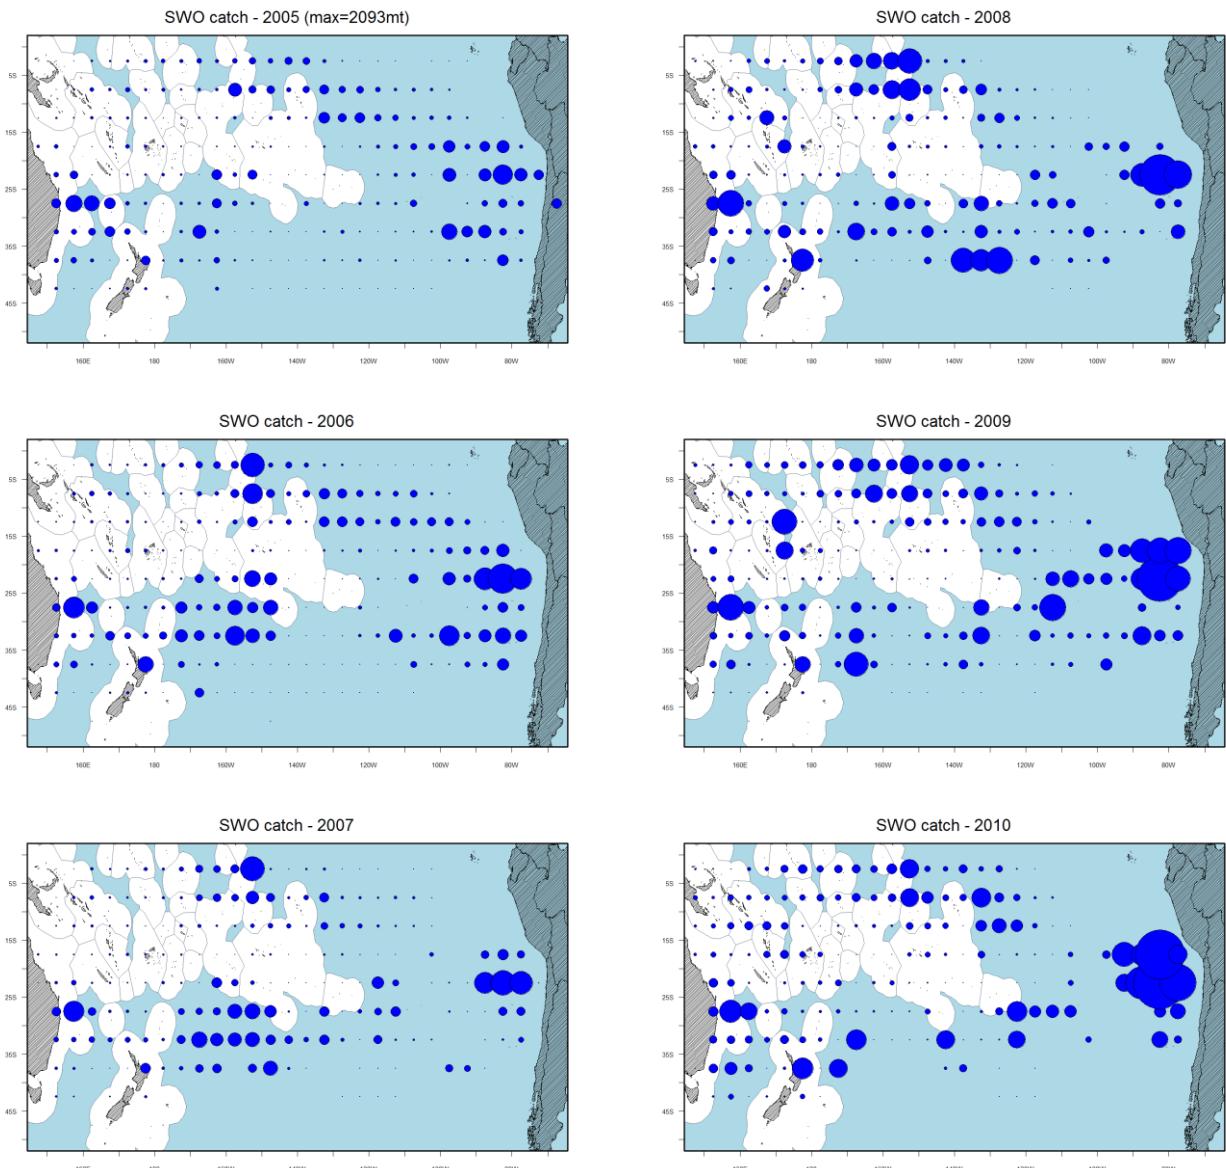

Figure 2: Spatial distribution of recent south Pacific swordfish catches - the largest circle represents an annual catch of 2093mt. Note that data for 2010 are likely to be incomplete.

The spatial distributions of recent (2005-2010) catches are presented in Figure 2. There are four main areas of catches 1) the far eastern Pacific Ocean off Chile and Peru; 2) the south central Pacific Ocean region south of the Cook Islands and French Polynesia; 3) coastal waters of New Zealand and Australia; and 4) the equatorial Pacific Ocean between 160 W and 130 W. Catches in regions 1 and 2 are dominated by the Spanish flagged vessels, catches in region 3 is primarily dominated by New Zealand and Australia flagged vessels, but there are also catches from Spanish flagged vessels, and region 4 is dominated by catches from the traditional distant water fleets of Japan, Korea, and Taiwan, where swordfish are taken as bycatch in the tropical tuna target fishery. The previous WCPFC assessments (Kolody et al, 2009) have focussed on fishing activities in regions 2 (south central Pacific) and 3 (southwest Pacific Ocean).

2.2 LENGTH DATA

The length data holdings for swordfish in the south Pacific are characterised by a large number of recent samples that have been collected at 5cm resolution. A comparison of total length samples and those length samples collected at 1cm resolution are provided in Figure 3.

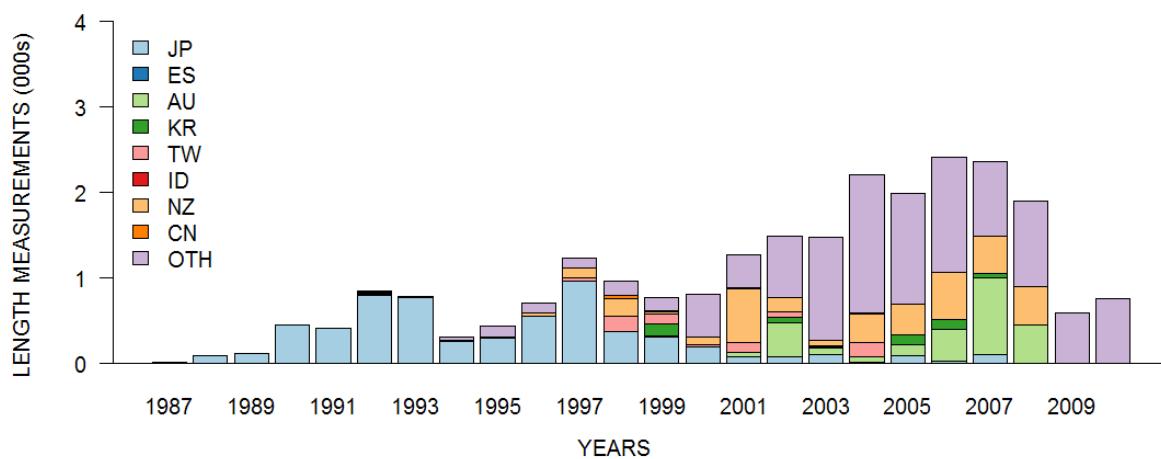

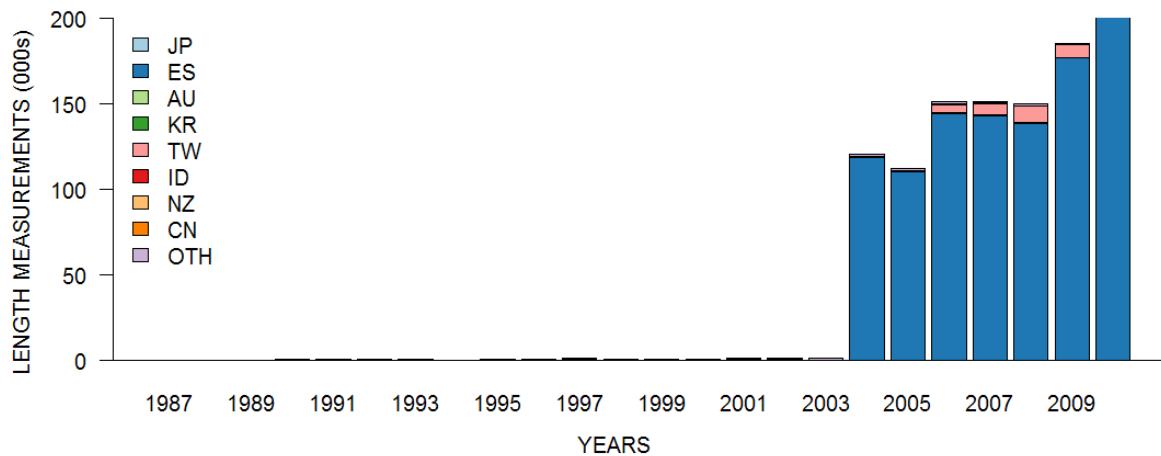

Figure 3: Total (top) number of swordfish length measurements by year and flag and the numbers that were measured at 1cm intervals (bottom).

All of the samples from Spanish flagged vessels are provided at 5 cm resolution as are most of the recent samples from Chinese-Taipei flagged vessels. Most of the finer resolution data in recent years comes from observer programmes operating in the EEZs of Pacific Island Countries and Territories (PICTs).

If all length data is considered, then length samples are available for a very high (> 70% in most years) proportion of the catch records, but this drops to around 40% in recent years if only 1 cm resolution data are considered and fall even lower in 2009-2010 due to other data gaps mentioned later (Figure 5).

2.3 WEIGHT DATA

Weight frequency data available to WCPFC are presented in Figure 4. Most of the available data is from New Zealand and represents a high proportion of their total catch and other data is available for Pacific Island flagged fleets.

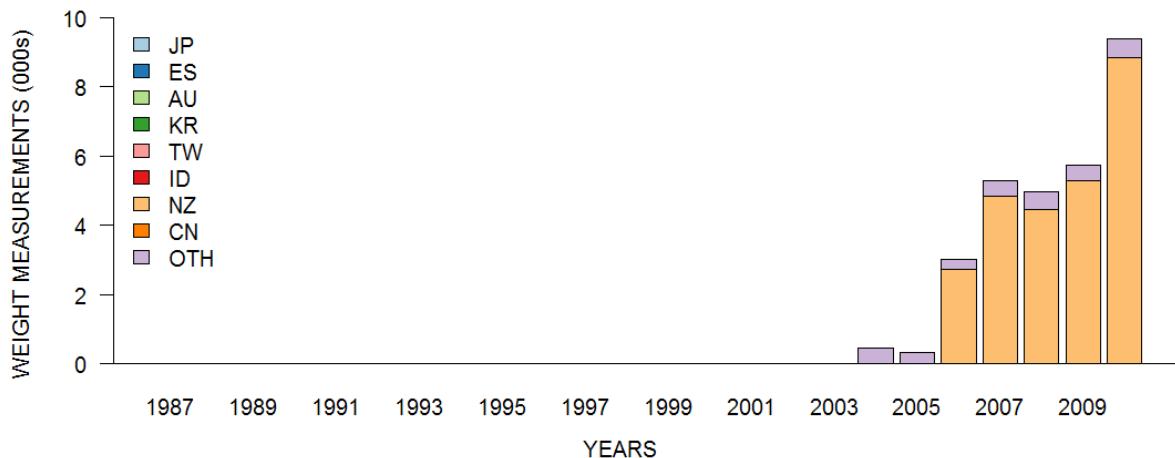

Figure 4: Total number of swordfish weight measurements by year and flag in WCPFC holdings.

2.4 CATCH PER UNIT EFFORT DATA

Previous assessments have indicated the critical need for operational level CPUE data in order to derive abundance indices for swordfish (Kolody et al. 2009). The percentage of the total swordfish catch for which operational level data are available (to the WCPFC) is shown in Figure 5. This peaked at around 50% in the late 1990s/early 2000s during the development of the Australian and New Zealand fisheries. With the expansion of the Spanish and Chinese-Taipei fleets the level dropped off to below 20%. Essentially there is no operational level CPUE data for non-PICT fleets available to the WCPFC.

A further complication with the Spanish flagged vessels is that the aggregate catch and effort data submitted to WCPFC does not contain catches of any other species as required by WCPFC data provision rules. This has been pointed out in recent data gap papers (OFP 2010).

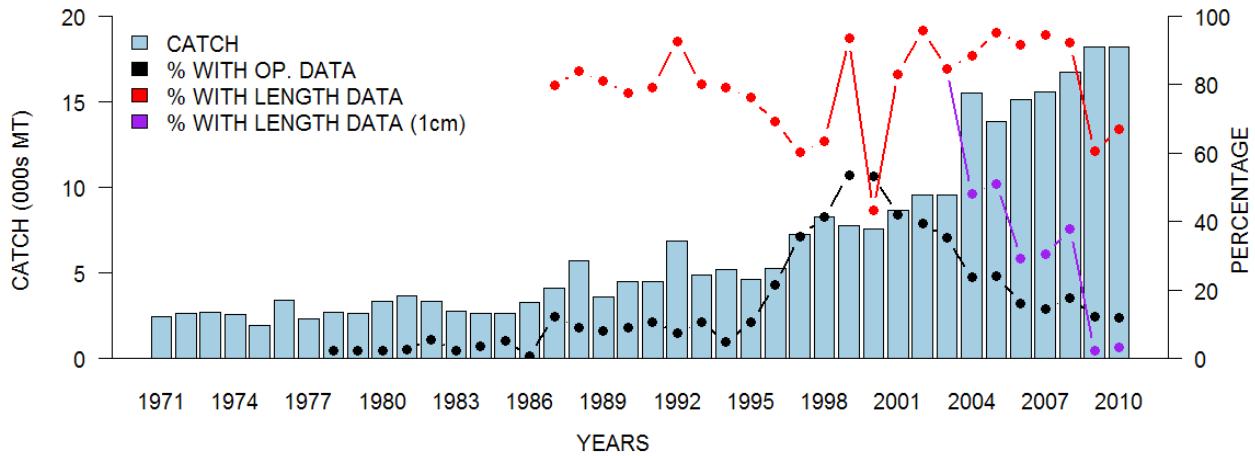

Figure 5: Total south Pacific swordfish catches (MT - blue bars) and the percentage of the catch records for which operational level CPUE data (black line), any size measurement (red line), and size measured at 1cm resolution (purple line) are available.

2.5 DATA GAPS IN WCPFC HOLDINGS

There are some other gaps in the WCPFC holdings due to data either: a) data not yet being imported into the WCPFC databases; b) data that exist within SPC holdings but have not yet been authorised for release to the WCPFC; or c) data exist but have not been provided to either WCPFC or SPC:

- Length data from the Australian and New Zealand longline fisheries (collected by observers) for 2009 and 2010 have been provided but have yet to be loaded into the WCPFC databases due to changes in data structures;
- Processor measured and recorded dressed weights (trunked) pertaining to swordfish landed at various ports within the Australian Eastern Tuna and Billfish Fishery operating off eastern Australia have been collected since mid-1997. Weights for 307,470 individual fish have been collected so far (Campbell et al 2011). Provision of these data to WCPFC would not be inconsistent with the WCPFC data provision rules;
- Dressed weight data held at NRIFSF, Japan pertaining to individual swordfish sampled from longline fleets operating across the southern WCPO. Provision of these data to WCPFC would not be inconsistent with the WCPFC data provision rules;
- SPC holds considerable amounts of operational level data for foreign flagged vessels fishing in SPC member EEZs (e.g. Japanese vessels operating in the waters of New Zealand and Australia) which have not yet been authorised for release to the WCPFC;
- Distant-water fishing nations hold finer scale catch and effort data than that provided to the WCPFC and in the past these data have often been made available to stock assessment teams for specific analyses; and
- SPC holds considerable amounts of observer data for longline vessels fishing in the WCPFC. Some of these data are available to the WCPFC, but most are not. Data not available to the WCPFC are for trips that are not classified as RoP trips and for historical data for which authorisation to release has not been provided by the coastal state.

3 TAGGING DATA

There is no requirement to provide tagging data to WCPFC, but the information collected from these studies on the movement dynamics and habitat preferences of swordfish also provides a greater understanding of stock structure and assists in the interpretation of catch rates. A summary of the projects that have placed

pop-off satellite (PSAT) tags on broadbill swordfish within populations occurring across the south Pacific is provided in Table 1.

Table 1: Summary of tag releases and reporting rates for smart tags placed on broadbill swordfish in the southern Pacific Ocean.

Region	Year	# Deployed	# Reporting	Duration	Reference
Western Tasman Sea	2006	10	8	2 - 302 days	Evans (2010)
	2007	14	11	2 - 181 days	
	2008	28	25	2 - 364 days	
	2009	5	4	2 - 17 days 9	
New Zealand EEZ	2006	12	11	9 - 234 days	Holdsworth et al (2010)
	2007	1	1	203 days	
	2008	5	4	3 - 209 days	
	2009	1	1	21 days 9	
South-east Pacific	2007	21	19	3 - 166 days	Abascal et al (2010)
South-central Pacific (Cook Islands)	2009	8	6	8 - 352 days	Pamela Maru (pers. comm.)
	2010	1	1	29 days	
	late 2011	11	na	na	

4 STOCK ASSESSMENT IMPLICATIONS

Two of the key concerns of previous stock assessments were the paucity of operational level data and the low resolution length measurements (Kolody et al, 2009). Given the large absolute size of swordfish it is not clear that length data at a 5cm resolution would not be sufficient to estimate gear selectivity and potentially even trends in the sizes of individuals in the catch. The previous concerns related primarily to the inability of the MULTIFAN-CL modelling software to incorporate size data at different resolutions and therefore to include the Spanish data, collected at 5cm resolution, would require aggregating all other size data to 5cm as well. Modification to MULTIFAN-CL will be necessary to more optimally use the data at the finest possible resolution – but this is not a data gap.

Cooperation from coastal and flag states and the assessment group will be necessary to maximise the amount of operational level data available for any assessment, as their current exists considerable operational level CPUE data that is not within WCPFC, and in many instances, SPC holdings. The lack of both operational level CPUE data, and bycatch information within the aggregate data for the Spanish flagged vessels is likely to make the estimation of reliable abundance indices difficult, especially to support a south central Pacific Ocean assessment.
