

**SCIENTIFIC COMMITTEE
THIRTEENTH REGULAR SESSION**

Rarotonga, Cook Islands
9–17 August 2017

ESTIMATES OF ANNUAL CATCHES IN THE WCPFC STATISTICAL AREA

WCPFC-SC13-2017/ST-IP-1

Paper prepared by

Oceanic Fisheries Programme (OFP)
Pacific Community (SPC)
Noumea, New Caledonia

Introduction

Estimates of annual catches in the WCPFC Statistical Area (Figure 1) are presented for target tuna species, i.e., albacore (*Thunnus alalunga*) bigeye (*Thunnus obesus*), skipjack (*Katsuwonus pelamis*) and yellowfin (*Thunnus albacares*), and major billfish species, i.e., black marlin (*Makaira indica*), blue marlin (*Makaira mazara*), striped marlin (*Tetrapturus audax*) and swordfish (*Xiphias gladius*). Estimates of catches of southern bluefin tuna (*Thunnus maccoyii*) are compiled by the Commission for the Conservation of Southern Bluefin Tuna (CCSBT).

Target Tuna Species

Tables 1–7 and Figures 2 and 3 present estimates of annual catches of target tunas in the WCPFC Statistical Area. For a breakdown of recent catch estimates by gear and flag, see WCPFC (2016). For discussion regarding trends, see Williams et al. (2017).

Recent studies using observer data (e.g. Lawson, 2007, Lawson, 2010, Lawson, 2012, Hampton and Williams, 2011, Hampton and Williams, 2015, Hampton and Williams, 2016, Hampton and Williams, 2017) show that the logsheet-reported catch, mainly for associated sets, should contain higher quantities of yellowfin and bigeye tuna that have been misreported as skipjack tuna. Purse-seine catch estimates that have been adjusted with species compositions determined from observer grab samples corrected for size selectivity bias (see Lawson, 2010, Lawson, 2012 and Lawson, 2013) are presented as the official purse-seine catch estimates in Table 5. All composite tables and figures referring to purse-seine species catch are consistent with the Table 5 estimates of purse-seine catches of skipjack, yellowfin and bigeye tuna.

Tables 7–10 present estimates of annual catches of target tunas in the WCPO Area and the EPO Area (Figure 1) by gear type. Tables 11–13 present estimates of annual catches of target tunas for the WCPO, the EPO and the Pacific Ocean by species. Tables 14 and 15, and Figures 4 and 5 present global catches of target tunas, by species and ocean area, respectively.

Tuna Discards

Observer data have been used to determine the discard rates for albacore, bigeye and yellowfin and bigeye caught by longliners (Table 16) and skipjack, yellowfin and bigeye caught by purse seiners (Table 17).

Tuna discards by longliners in the WCPFC Statistical Area during 1994–2016 were estimated by applying discard rates by flag and year, determined from observer data, to tuna species catch estimates, by flag and year, and then summing the tuna discards (by species) across all flags. Discard rates for flag/year combinations where there were insufficient data (defined as (i) less than 10 observer trips or (ii) less than 500 fish samples available), were substituted with discard rates determined for year (with all flags combined). The total discard rate for the three target tuna species caught by longliners during the period was 2.1%. During 2016, the estimated tuna discard was 2.3% and based on available observer data, most of the bigeye and yellowfin tuna discards comprised of fish less than 95 cm (Figures 6 and 7), noting that many discarded tuna are also not available to be measured by the observer.

Tuna discards by purse seiners in the WCPFC Statistical Area during 1995–2016 were estimated by applying discard rates by flag, year and school association (unassociated and associated), determined from observer data, to tuna species catch estimates, by flag, year and school association, and then summing the tuna discards (by species) across all flags. Discard rates for flag/year/school association combinations where there were insufficient data (defined as (i) less than 5 observer trips or (ii) less than 1,000 mt of catch observed), were substituted with discard rates determined for school association (with all years/flags combined) for years prior to 2008, and substituted with discard rates determined for year/school association (with all flags combined) for years since 2008. This method was used since an analysis of variance of discard rates for skipjack, yellowfin and bigeye caught by purse seiners indicated that species, school association and flag, but not year, were significant predictors. However, in recent years, there have been management measures (CMM 2009-02) introduced to restrict the discard of tuna which means that the year effect has been considered in the estimation process for recent years. The total discard rate for the three target tuna species caught by purse seiners during

this period was 3.1%, with an estimated 2.9% discarded in 2015. [Note that the reporting of purse-seine discards by vessel is a requirement under CMM 2009-02 and is currently independent to the estimates produced in this paper].

The submission of annual estimates of discards for the WCPFC key species will be a mandatory requirement under the *Scientific Data to be Provided to the Commission*¹ covering data for years 2017 onwards.

Major Billfish Species

Table 18 presents estimates of commercial catches of the four major billfish species by gear type. Table 19 and Figure 8 present estimates of the major billfish catches for all gear types combined. Tables 20 and 21 present estimates of commercial catches of striped marlin and swordfish in the WCPFC Statistical Area north and south of the equator respectively. Table 22 present estimates of commercial catches of albacore, striped marlin and swordfish in the Pacific Ocean, south of the equator.
