SCIENTIFIC COMMITTEE
THIRTEENTH REGULAR SESSION

Rarotonga, Cook Islands
9 – 17 August 2017

ANNUAL REPORT TO THE COMMISSION
PART 1: INFORMATION ON FISHERIES, RESEARCH, AND STATISTICS

WCPFC-SC13-AR/CCM-20
Rev 1 (1 October 2017)

PHILIPPINES

ANNUAL REPORT TO THE WESTERN and CENTRAL PACIFIC FISHERIES COMMISION (WCPFC)

PART1: INFORMATION ON FISHERIES, RESEARCH AND STATISTICS

PHILIPPINE ANNUAL FISHERY REPORT UPDATE

June 2017

Scientific data was provided to the Commission in accordance with the decision relating to the provision of scientific data to the Commission by 30 April, 2017	Yes
If no, please indicate the reason(s) and intended actions:	

PHILIPPINE ANNUAL FISHERY REPORT 2017

Summary

The Philippines expresses its strong commitment to promote effective management in order to achieve the long-term conservation and sustainable use of highly migratory fish stocks in the western and central Pacific Ocean (WCPO) in accordance with the 1982 Law of the Sea Convention, the UN Fish Stocks Agreement, and the WCPF Convention. In giving effect to the provisions of the WCPF Convention, the Philippines upholds that conservation and management measures developed by the Commission, including the recent CMM 2016-01 on the conservation and management of bigeye, yellowfin and skipjack in WCPO.

There are various ongoing activities such as the National Stock Assessment Program (NSAP), Philippine Fisheries Observer Program (PFOP), catch documentation/validation, Vessel Monitoring System (VMS), collaborations with various government agencies (e.g. PSA, PFDA) including the tuna industry, supports Philippine efforts towards improving tuna data collection. The Bureau of Fisheries and Aquatic Resources (BFAR) has 374 trained observers (60% are active) and 30 trained debriefers. The VMS has already been operationalized particularly for those vessels operating in international waters (e.g. HSP1, Indian Ocean, other PIC waters).

Philippines was given limited access to High Seas Pocket 1 as Special Management Area (SMA) allowing only 36 traditional fresh/ice chilled fishing vessels operating as a group. Philippine-flagged vessels operating in HSP1 are managed under the DA-BFAR Fisheries Administrative Order 245-3 (FAO 245-3). Out of 36 catcher vessels there were thirty two (32) vessels that entered HSP1 for 2016. The total catch of these vessels operating in HSP1 for the period of January to December 2016 was around 24,424MT [Purse Seine (PS) = 20,487MT and Ringnet (RN) = 3,937MT] equal to 2,643fishing day/s (PS = 2,312 fishing days and RN = 331 fishing days).

The provisional catch estimates for the three tuna species of concern of the WCPFC in 2016 obtained during the 10thPhilippine/WCPFC Annual Tuna Catch Estimates Review Workshop were as follows: skipjack – 129,952MT; yellowfin – 81,035MT and bigeye – 3,963MT with a total provisional catch of 214,951MT.

The Sustainable Management of Highly Migratory Fish Stocks in the West Pacific and East Asian Seas Project (WPEA-SM) which aims to improve the management of highly migratory species in the West Pacific and East Asian Seas area, continues to help strengthen national capacities and international participation of Indonesia, Philippines and Vietnam in the work of the Commission.

Philippines through the BFAR-NFRDI and other concerned agencies together with the tuna industry is doing a lot of efforts to improve data collection and to strengthen its national capacity and international cooperation particularly on various transboundary concerns in relation to the sustainable conservation and management of highly migratory fish stocks.

BACKGROUND

The Philippines is still one of the top fish producing countries in the world. Over 1.6 million Filipinos depend on the fishing industry for their livelihood. The Philippines is also considered a major tuna producer in the Western and Central Pacific Ocean (WCPO).The fishing industry's contribution to the country's Gross Domestic Products (GDP) in 2015was 1.5% and 1.7% at current and constant prices, respectively *(Philippine Fisheries Profile, 2015)*.

Also in 2015, the foreign trade performance of the fishery industry gave a net surplus of 511million dollars. With a total export value of 943million US dollars and import value of 432million US dollars.Tuna remained as the top export commodity with a collective volume of 104,984MT for fresh/chilled/frozen, smoked/dried, and canned tuna products valued at US $296million.Canned tuna, though, constitutes bulk of tuna products being exported. In general, tuna exports is down by 11% in terms of volume and lower in terms of value by 33% than the previous year. Major markets for this commodity include USA, Japan and United Kingdom *(Philippine Fisheries Profile, 2015)*.

Chilled/frozen fish comprised the bulk of the total import in terms of value. Tuna, mackerel and sardines are the major import fish commodities in 2015. Tuna has the largest import share of 41% with an import value of US $177million. Chilled/frozen tuna were mostly supplied by Papua New Guinea 13%; Taiwan (ROC) 11%; China, 4.7%, Korea, 5.9% and Japan, 1.2%. Other fishery imports include mackerel, 13.4% and sardines 1.2%. *(Philippine Fisheries Profile, 2015)*.

ANNUAL FISHERIES INFORMATION

A. FLEET STRUCTURE

The fishing sector consists of municipal and commercial components, with the former involving vessels less than 3 GT in size, and under the jurisdiction of the Local Government Units (LGUs). The number of municipal vessels is not well documented in most areas. The larger commercial vessels (> 3GT) are required to fish outside municipal waters, beyond 15km off the shoreline and are required to secure commercial fishing vessel license (CFVL) at the Bureau of Fisheries and Aquatic Resources which is subject to renewal every three (3) years. With the implementation of RA 9379 or the Handline Fishing Law, this gives a separate category for the handline vessels which were formerly considered under the municipal fishing vessels.

The Bureau of Fisheries and Aquatic Resources (BFAR) classification of registered Philippine vessels operating in the Western and Central Pacific Region is shown in Table 1.

Table 1. Classification of Philippine registered vessels in WCPFC
Source: WCPFC Website, as of 10 May 2017

Type of Vessel	Number of Registered Vessels				Total
	<250 GT	>250 - 500GT	>500 - 1,000GT	> 1,000 GT	
Fish Carrier	97	7	7	15	**126**
Purse seine	48	11	16	21	**96**
Support Vessel	171	1			**172**
Total	**316**	**19**	**23**	**36**	**394**

B. ANNUAL TUNA CATCH IN THE PHILIPPINE EEZ

Since 1987, the official fishery statistics for the Philippines have been compiled by the Bureau of Agricultural Statistics (BAS), based on probability (stratified random sampling by data collectors) and non-probability surveys (interviews by regular BAS staff) surveys, supplemented by secondary data from administrative sources e.g. landings sites and ports (Vallesteros, 2002). Annual Fisheries Statistics for commercial, municipal, inland and aquaculture sectors are published for three year time frames and include volume and value of production by province and by region, information on fish prices and foreign trade statistics.

Catch breakdown by the 31 main marine species is available[1]. Estimates of annual bigeye and yellowfin catches for the past years have been reported as a combined catch (yellowfin/bigeye tuna) but for 2005 BAS started to separate catches for these two species of tunas (Table 2).However, there is still a need to improve the identification of these two (2) species to accurately reflect the actual catch of yellowfin and bigeye.

The annual tuna catch estimates include all the tuna catch unloaded in Philippine ports regardless where they were caught and does not separate those catches from foreign waters or whether it is caught by foreign-flagged vessel.

Table 2. Total tuna catch, by species, for 2012-2016
Source: PSA Annual Fisheries Statistics; 2016 data are provisional

Year	Commercial			Municipal			TOTAL
	Skipjack	Yellowfin	Bigeye	Skipjack	Yellowfin	Bigeye	
2012	163,026	77,730	7,912	41,327	45,698	4,568	**340,262**
2013	168,183	83,142	6,899	40,963	46,742	4,962	**350,891**
2014	194,583	94,256	6,188	39,270	45,664	4,980	**384,942**
2015	199,153	102,400	5,258	34,392	40,987	5,614	**387,804**
2016	181,610	70,565	8,106	30,321	35,103	7,505	**333,209**

Note: The annual tuna catch estimates for 2010-2016 includes all the tuna catch unloaded in Philippine ports regardless where they were caught and does not separate those catches from foreign waters or caught by foreign-flagged vessel which may account for around 108,393MT for 2016.

The 10thTuna Fisheries Catch Estimates Review Workshop last 29 - 30 May 2017 was conducted to review and validate Philippine catch estimates by species and gear type. Data from different sources, namely, BFAR (NSAP, logsheets, cannery receipts, Philippine FOP), PSA, PFDA and industry were presented and reviewed. Table 3 provides a breakdown of catch by gear and species according to the process undertaken in the workshop with the current 2016 PSA estimates. After removing the foreign-flagged catch landed in the Philippines (108,393MT) from the PSA estimate, there was a difference of around 13,299MT. The difference could be due to the difficulties in estimating the diverse municipal fisheries and could be explained as possible bias in the probability surveys due to very low coverage. The workshop participants noted that while the industrial fleet estimates are now becoming more reliable, there is still some problem in determining and validating the estimates of the small-scale municipal fisheries that needs to be resolved in the near future. But the workshop also noted that the estimation process has been improving compared to the previous years.

[1] Around 20% of the municipal catch and 6-8% of the commercial landings are not captured by these 30 species

Table 3. Reconciliation of 2016 Tuna Catch Estimates by Gear and Species with the 2016 PSA Total Tuna Catch Estimates (in MT)
Source: Tenth Philippine/WCPFC Annual Tuna Catch Estimates Review Workshop Report

GEAR/SPECIES	SKJ	YFT	BET	TOTAL
Purse seine	41,415	15,967	908	**58,290**
Ringnet	26,475	8,290	636	**35,401**
Hook-and-line	7,818	31,781	1,177	**40,776**
Others	6,420	2,546	124	**9,090**
TOTAL	**82,127**	**58,584**	**2,845**	**143,557**

* Note: Provisional catch estimate does not include catches of Philippine flagged purse seine vessels in PNG which accounts for around 71,394MT for 2016.

Also included in the tuna catch estimates are catches of Philippine-flagged vessels fishing in high seas pocket #1 (HSP1). Since2013, Philippines was given limited access to High Seas Pocket 1 as Special Management Area (SMA) allowing only 36 traditional fresh/ice chilled fishing vessels operating as a group. Philippine-flagged vessels have been operating under the Regulations and Implementing Guidelines on Group Tuna Purse Seine Operations in High Seas Pocket Number 1 as a Special Management Area (DA-BFAR-FAO 245-3). Out of 36 catcher vessels there were thirty two (32) vessels that entered HSP1 for 2016. The total catch of these vessels operating in HSP1 for the period of January to December 2016 is around 24,424MT [Purse Seine (PS) = 20,476MT and Ringnet (RN) = 3,937MT] equal to 2,643fishing day/s (PS = 2,312 fishing days and RN = 331 fishing days).

Tuna catch breakdown by gear is not available from the present Philippine Statistics Authority (PSA, formerly BAS) national statistics publication. However, the WCPFC Tuna Fishery Yearbook has also provided an estimated breakdown of catch by gear (Table 4).

No other fishing by foreign flag vessels is permitted in the Philippines EEZ, but a considerable amount of IUU fishing, based on the regularity of apprehensions of vessels illegally fishing in Philippine waters, would seem to occur, much of it involving tuna vessels. A desk study carried out in 1995 (PTRP, 1995) concluded that IUU longline catches of up to 10,000MT (40% yellowfin) may have been taken in some years.

Landings by foreign longline vessels are permitted in Davao (Toril) port, where around 1,800 - 4,000MT (2012 – 2016) of mostly tuna is landed annually (Table 8). Over half is retained for processing and consumption, with the rest transshipped by air. Most of these retained catch do not pass the export quality standards and import permit is not necessary since the DA Secretary has signed a certificate of necessity. It is also assumed that all of this catch is taken outside Philippine waters.

Table 4. Estimated catch of oceanic tuna species, by gear type, for 2011–2015in Western and Central Pacific Oceans (in MT)
Source: WCPFC Tuna Fishery Yearbook 2015

Year/Species	Handline	Hook-and-Line	Longline	Purse seine	Ringnet	Others	Total
2011

Total	24,388	31,144	-	132,219	45,799	14,283	247,833

C. ANNUAL CATCHES IN THE CONVENTION AREA

In addition to the estimated catch by Philippine vessels in the EEZ (see above), to this must be added catches by Philippines flag vessels taken outside the EEZ and elsewhere in the Convention area. The extra - EEZ catches are assumed to include those made by purse seine and ring net vessels in adjacent areas and based in overseas ports, and catches by the wide-ranging handline vessels. BFAR has already required fishing vessels such as purse seine and ringnet to adopt the logsheet system to address the above issue. The fisheries data collection system records all catch landed by Philippine registered vessels including those fish caught outside Philippine waters (e.g. PNG, PIN waters).

Purse seine catches in the PIC waters

Data on the catch by Philippine flag purse seine vessels fishing in Papua New Guinea (PNG) waters are available from the SPC Regional Database, and are summarized for the period 2012-2016 below.

Table 5. Catch by Philippine flag purse seine vessels in PIC waters, 2012-2016.

Source: SPC Regional Tuna Fishery Database

Year	No. of Vessels	Catch (in MT)			
		Skipjack	Yellowfin	Bigeye	Total
2012	25	56,501	30,452	700	87,653
2013	27	49,014	35,226	597	84,837
2014	29	64,191	39,945	2,843	106,979
2015	23	46,298	27,384	1,578	75,260
2016	22	47,825	22,451	1,118	71,394

* 2016 – preliminary; with fishing access in PNG

Longline catches

In 2016, no Philippine longline vessel operates within the WCPFC Convention Area (WCPFC-CA) and beyond our national jurisdiction. But there were two (2) or more distant-water Philippine longline vessels that operate in the past that have been granted fishing access in other PIC waters (e.g. Kiribati), catches for these vessels are summarized below.

Table 6. Catches of Distant – water Philippine flag longline vessel/s fishing in the WCPFC Convention Area for 2011 – 2014 (MT)

Species	2011	2012	2013	2014
Yellowfin	**145.77**	**60.63**	**27.16**	**2.78**
Bigeye	**777.06**	**247.83**	**166.56**	**52.90**
Albacore	**36.39**	**23.96**	**30.47**	**1.16**
Others	**174.96**	**62.66**	**10.69**	**38.67**
Total	**1,134.18**	**398.08**	**234.87**	**95.51**

DISPOSAL OF CATCH

Most of the **municipal** tuna catches are landed as wet fish all over the Philippines. Much of the municipal catch is processed by drying, salting, smoking etc. A portion of the municipal tuna catch would enter large scale commercial processing like the large handline-caught tuna exported as sashimi and marketed either frozen or smoked, mostly in General Santos City and possibly small amounts are sold as wet fish direct to canneries.

The **commercial** domestic tuna catch of oceanic tunas is increasingly directed towards processing by domestic canneries, based in the Philippines and elsewhere, with lesser amounts to frozen smoked operations. The estimated 124,000MT annual output of 8 canneries is mostly supplied by landings from Philippine purse seiners and ring netters, both local vessels and via carriers from overseas operations. Overseas operations also supply canneries in PNG (~50,000MT p.a.); some tuna is imported to supplement cannery supply.

Official figures for **exports of tuna products** for the period 2012-2016 are tabulated below. The first category includes chilled sashimi quality fish and frozen whole fish for tuna canning.

Table 7. Tuna exports by commodity, 2012 –2016
Source: PSA Fisheries Statistics for 2012–2016

Tuna commodity, by volume (MT)	2012	2013	2014	2015	2016
Fresh/chilled/frozen	22,910	20,177	28,808	26,815	22,381
Dried/smoked	8,000	2,725	1,460	548	1,252
Canned	38,796	29,660	58,660	73,411	66,284
TOTAL VALUE (million USD)	455.10	664.50	459.83	414.42	274.26

* 2016provisional data

ONSHORE DEVELOPMENTS

A. HARBOR INFRASTRUCTURE

The General Santos Fish Port Complex (GSFPC), the country's major tuna unloading port, with 206,719MT total unloadings in 2016, has undergone expansion and improvement. Major components of the said expansion/improvement project includes construction of deep wharves, cold storage and processing area, port handling equipment, power substation, waste water treatment plant, water supply system and other ancillary facilities. GSFPC port facilities have already met international standards for HACCP GMP-SSOP and accredited by the European Union (EU), Japan and United States. Six other major fish ports in the country are proposed for rehabilitation in the near future. The Navotas Fish Port Complex, in Metro Manila is the second largest tunalandings are recorded with unloadings of around 10,000 MT annually. Rehabilitation project for NFPC includes upgrading of port facilities *(such as roads, electrical and power system, landing quay and west breakwater)*, construction of cold storage and processing plant, and waste water treatment facilities.

B. PROCESSING PLANTS

There are currently 8 tuna canneries in the Philippines, 6 in General Santos and 2 in Zamboanga.

There are two Philippine-owned and operated canneries in Papua New Guinea one in Madang and another one in Lae processing around 50,000MT per year.

Most of the handline catch supply fresh and frozen sashimi grade to the export processors and some to the domestic market. There are more than 17 frozen tuna processors in the Philippines, 70% of which are located in General Santos City and supports about 3,000jobs. Majority of its production is exported to US and European countries.

OTHER CMM REPORTING REQUIREMENTS

A. Conservation and Management Measure-2005-03 (North Pacific Albacore)

In 2016, Philippine catches for north pacific albacore is around 79MT. Catches for this species were mainly contributed by municipal hook-and-line fishery using vessels less than 3GT, targeting yellowfin tuna, operating in the northern part of the Philippines and seasonal in nature. Philippines has difficulty in quantifying fishing effort for this fishery due to the diverse nature of this fishery in the country.But with increased port sampling coverage by our National Stock Assessment Program (NSAP), Philippines will be able to quantify fishing effort in the coming years.

B. Conservation and Management Measure 2012-07 (Seabirds)

There were no reported seabird interaction for 2016 since there are no Philippine-flag longline vessel operating in the WCPFC convention area (*North of 23^{o} North* or *South of 30^{o} South*).

C. Conservation and Management Measure 2009-03 (Swordfish)

Philippines does not have vessels that mainly targets swordfish but our fleet do have some records of catches for this species of around 15MT in 2016 as by-catch for our hook-and-line fishery that were mainly operating in Philippine waters and none of our vessel was operating south of 20^{o}S.

D. Conservation and Management Measure 2010-07 (Sharks)*

Since 2009, Philippines has been implementing its National Plan of Action for Sharks. Based on available reports (e.g. observer reports, port sampling), sharks that were caught were released or fully utilized (as defined in CMM-2010-07 paragraph 6). In 2016, a total of 108 sharks that were caught were fully utilized or released. There was a total of 107releases [e.g. Silky sharks – 92released dead, 13 released alive and 1 – fully utilized); (Oceanic Whitetip shark – 1 released dead); (Longfin mako shark – 1 released dead].

E. Conservation and Management Measure 2011-03 (Protection of Cetaceans from Purse seine Operation)*

Based on available reports for 2016, when a cetacean was unintentionally encircled in the purse seine net during the purse seine operation, Philippine purse seine vessel crew always tried their best effort or always took reasonable steps to ensure the cetacean safe release including stopping the net roll and not recommencing fishing operation until the animal has been released safely and alive and no longer at risk of recapture.In 2016, there was a total of 17 instances that a cetacean was unintentionally encircled by a purse seine net and these were all released alive but subsequently died[e.g. (Indo-Pacific bottlenose dolphin – 1 and bottlenose dolphin –7instances encircled and released but subsequently died); (long-beaked common dolphin – 4 and rough toothed dolphin – 4 instances encircled and released but subsequently died); (false killer whale – 1 instance encircled and released but subsequently died)].

F. Conservation and Management Measure 2011-04 (Oceanic White-tip Shark)*

Philippines has already prohibited its vessels from retaining on board, transshipping, storing on a fishing vessel, or landing any oceanic whitetip shark, in whole or in part, in the fisheries covered by the Convention and require its vessels to release any oceanic

whitetip shark that is caught as soon as possible after the shark is brought alongside the vessel, and to do so in a manner that results in as little harm to the shark as possible. In 2016, there was only one instance that an oceanic white-tip was unintentionally encircled in the purse seine net during the purse seine operation. The oceanic whitetip shark was released but subsequently died.

G. Conservation and Management Measure 2012-04 (Protection of Whale Sharks from Purse Seine Operation)*

Since 1998, whale sharks are considered protected species in the Philippines under Fisheries Administrative Order No. 193 or the Ban on the taking or catching, selling, purchasing and possessing, transporting and exporting of Whale Sharks and Manta Rays (FAO 193 series of 1998). In 2016, there were three (3) reported alleged incidents that a whale shark was encircled in the purse seine net during the purse seine operation. Based on available reports these whales sharks were released (2 – released alive and 1-unknown condition).

H. Conservation and Management Measure 2013-08 (Silky Sharks)*

Since the effectivity of CMM 2013-08 (July 1, 2014), Philippines has already prohibited its vessels from retaining on board, transshipping, storing on a fishing vessel, or landing any silky sharks, in whole or in part, in the fisheries covered by the Convention and require its vessels to release any silky shark that is caught as soon as possible after the shark is brought alongside the vessel, and to do so in a manner that results in as little harm to the shark as possible. Based on available reports for 2016, there was a total of 105 releases for silky shark (Silky sharks – 92 released dead, 13 released alive and 1 –fully utilized). These were incidentally caught silky sharks during the purse seine operation.

I. Conservation and Management Measure 2014-04 (Pacific bluefin tuna)

The Philippines does not conduct fishing activities targeting Pacific bluefin tunas in the area north of 20° N. However, in some years, there are by-catches of Pacific Bluefin tunas in areas south of 20° N. These fishing vessels utilize handline/hook-and-line fishing gears. For 2016, one (1) piece of Pacific bluefin tuna was reported caught weighing around 215kgs. Philippines has improved its catch documentation mechanisms to monitor all tuna landings throughout the country.

STATUS of TUNA FISHERY DATA COLLECTION SYSTEMS

A. LOGSHEETS DATA COLLECTION

Since 2008, the Bureau of Fisheries and Aquatic Resources (BFAR) launched the catch documentation scheme which includes the catch and effort logsheet system for the purse seine and ringnet vessels. Aside from this BFAR also requires canneries to submit monthly cannery unloading data. TUFMAN Database and PECAN Database systems are being utilized to process the data collected from logsheets and cannery receipts, respectively. All these efforts are geared towards improving tuna statistics/data gathering. DA-BFAR Fisheries Administrative Order (FAO 238): Rules and Regulations Governing the Implementation of Council Regulation (EC) No. 1005/2008 on Catch Certification Scheme requires all vessels especially those exporting in EU market to submit catch logsheets as requirement for the issuance of Catch Certificates and this helped improve timely logsheets data compliance. Recently, BFAR Administrative Circular No. 251 (Series of 2014) entitled Traceability System for Fish

and Fishing Products which establishes traceability system for wild-caught, farmed fish and other aquatic products. One of the data requirements for wild-caught fish products for traceability/documentation is to submit logsheets data. Logsheets submission is also required for all vessels under Section 38 of the Philippine Fisheries Code (Republic Act 8550) as amended by Republic Act 10654.

B. OBSERVER PROGRAM and VESSEL MONITORING SYSTEM (VMS)

The BFAR regularly conducts observer training, twice in a year to recruit new observers. There are 374trained observers (60% active) ready to board the vessels especially to those vessels intending to fish during the FAD closure period within the Philippine EEZ and for high sea pocket # 1 (HSP1) operation.All our HSP1 fishing operations have 100% observer coverage.The program has 30trained debriefers (10 active) to conduct debriefing procedures and protocols to the observers. There is also observer coverage to those vessels fishing in the PNG EEZ, provided by PNG NFA.

The Bureau of Fisheries and Aquatic Resources (BFAR) has operationalized the national VMS particularly for those vessels fishing in high sea pocket #1 (HSP1). The Implementing Rules and Regulations of the Philippine Fisheries Code (Republic Act 8550) as amended by Republic Act 10654, Section 119 details the implementation requirements of the Vessel Monitoring Measure (VMM) for catcher and carrier vessels 30GT and above. While Section 116 details implementation requirements for fisheries observer coverage for fishing vessels 200GT and above, and also those fishing vessels that fish during the FAD closure period.

There were three (3) DA-BFAR Fisheries Administrative Orders that supports the implementation the Philippine Fisheries Observer Program (PFOP) and operationalization of Vessels Monitoring System (VMS). These were FAO No. 240: Rules and Regulations in the Implementation of Fisheries Observer Program in the High Seas,FAO No. 241: Regulations and Implementation of the Vessel Monitoring System in the High Seas and FAO 245-3: Regulation and Implementing Guidelines on Group Tuna Purse Seine Operations in High Seas Pocket Number 1 as a Special Management Area.

C. PORT SAMPLING PROGRAM

The National Stock Assessment Program (NSAP) has continued to collect port sampling data (e.g. species composition, length frequency and vessel catch and effort information) in major tuna landing sites. In 2010 – 2013, the West Pacific East Asia Oceanic Fisheries Management Project (WPEA-OFMP) was able to increase port sampling coverage covering some of the major tuna landing areas around the country. Since 2014, the Philippine government through BFAR gave more funding to support expansion of the NSAP which aims to cover / monitor almost all the tuna landing areas in the country to come-up with a more reliable data particularly for the diverse municipal tuna fisheries, for our WCPFC data obligation and also for better fisheries management. Data from NSAP has been used as basis for coming up reliable tuna catch composition during the annual tuna catch estimates review workshops.

D. UNLOADING

Landings / unloadings by foreign vessels is permitted in only one port in the Philippines - Davao (Toril), as noted earlier. Table 8 below lists the details of these foreign flag vessel unloadings in Davao Fish Port.

Table 8. Vessel Arrivals and Unloading Volumes by Foreign Vessels, Davao Fish Port, 2012 - 2016
Source: PFDA, 2017

Year	Port Calls	Volume of Unloadings (MT)
2012	327	2,536
2013	297	3,994
2014	305	2,988
2015	291	2,227
2016	280	1,853

RESEARCH& FUTURE ACTIVITIES COVERING TARGET & NON-TARGET SPECIES

The West Pacific East Asia Oceanic Fisheries Management Project (WPEA-OFMP) was implemented from January 2010 to December 2013. The phase-2 of this project entitled Sustainable Management of Highly Migratory Fish Stocks in the West Pacific and East Asian Seas aims to strengthen national capacities and regional cooperation to implement fishery sector reforms that will sustain and conserve the highly migratory fish stocks in the West Pacific Ocean and East Asian Seas while considering climatic variability and change is expected to finish in Janaury 2019. This project focused on three (3) components, namely, i) strengthened regional governance and national adaptive capacity in management of highly migratory fish stocks moving amongst the Pacific Ocean Warm Pool Large Marine Ecosystem (POWPLME) and East Asian LMEs; ii) implementation of policy, institutional and fishery management reform; and iii) knowledge sharing on highly migratory shared fish stocks.This project helps country partners (Indonesia, Philippines, Vietnam), to comply with their WCPFC data requirements and obligations.

The Implementing Rules and Regulations (IRR) of Republic Act (RA)10654 "An act to prevent, deter and eliminate illegal, unreported and unregulated fishing, amending Republic Act 8550, otherwise known as " The Philippine Fisheries Code of 1998", and for other purpose, took effect last October 2015. One of the policy declarations of the law was *"to ensure the rational and sustainable development, management and conservation of the fishery and aquatic resources in Philippine waters including the Exclusive Economic Zone (EEZ) and in the adjacent high seas, consistent with the primordial objective of maintaining a sound ecological balance, protecting and enhancing the quality of the international conventions and cooperate with other states and international bodies, in order to conserve and manage threatened aquatic species, straddling and highly migratory fish stocks and other living marine resources"*. Section 32 also states that *"all distant water fishing vessels shall comply with the conservation and management measures of RFMOs where they are conducting fishing"*. The IRR has outlined in detail our policy approaches and the corresponding timelines in carrying out the objectives of the law.

The13th WCPFC Regular Session in December 2016 has adopted Conservation and Management Measure for Bigeye, Yellowfin and Skipjack Tuna in the Western and Central Pacific Ocean (CMM 2016-01). Philippines has approved and implemented its own Fisheries Administrative Order No. 245-3(FAO 245-3) on the Regulations and Implementing Guidelines on Group Tuna Purse Seine Operations in High Seas Pocket Number 1 as a Special Management Area. This was supported by other FAOs such as the National Tuna Fish Aggregating Device (FAD) Management Policy (FAO No. 244),FAO 236-4: Extension of FAO 236 series of 2010 or the Rules and Regulations on the Operations of Purse Seine and Ring Net Vessels Using Fish Aggregating Devices (FADs) locally known as *Payaos* during the FAD

Closure Period, and other FAOs which have been approved and implemented.These national laws, rules and regulations also applies to our 2017 operation in the WCPFC Convention Area. These DA-BFAR Fisheries Administrative Orders will make sure that conservation and management objectives on CMM 2016-01 will not be compromised.
