Oceanic Fisheries Programme (OFP)  
Pacific Community (SPC)

**Revisions since SC16**

1. Updates to Tables 1–6. Update to Figures 1, 3 and 4

---

<sup>1</sup> This version is an update of the paper that was posted to SC16 meeting as SC16-ST-IP-02 dated 22 July 2020

## 1. Introduction

1. Observer data management encompasses a number of activities that ensure the data collected by observers are made available for the work of the Western and Central Pacific Fisheries Commission (WCPFC) in a form that is both representative and of acceptable quality. The underlying activity involved in Observer data management is the management and entry of the observer data into a standardised database system, but it also covers the many other related activities with examples described in Williams (2011).
2. The Pacific Community's (SPC) Oceanic Fisheries Programme (SPC-OFP) has been processing observer data on behalf of its member countries for more than 15 years. The Seventh Regular Session of the WCPFC (6–10 December 2010) approved the continuation of this work in respect of the Regional Observer Programme (ROP) data in the short- to medium-term (Anon., 2010a, Anon., 2010b). The Sixteenth Regular Session of the Commission (5–11 December 2019; Anon., 2020) reconfirmed the Commission's support for ROP data processing with its inclusion in the indicative budget for the period 2020-2022.
3. The Pacific Island Forum Fisheries Agency (FFA) processes observer data for the US Multilateral Purse Seine Treaty and these data are regularly incorporated into the ROP data submitted to the WCPFC. Staff supported by the WCPFC Regional Observer Programme (ROP) data management project based at the WCPFC Secretariat mainly process data from the national observer programme of the Federated States of Micronesia (FSM). WCPFC members other than Pacific Island countries have also contributed to the ROP Database including Australia, China, EU, Japan, Korea, New Zealand, Philippines, Chinese Taipei and the USA.
4. The majority of the observer data processed by the SPC are ROP-defined purse seine trips<sup>2</sup>, which have been designated as the highest priority for processing since 2010. However, the WCPFC requirement for 5% observer coverage in the longline fishery (established in 2012) has resulted in increased submission of observer longline data in recent years and these data are now assigned equal priority for processing as the purse seine observer data. The SPC-OFP also processes non-ROP observer data that are, *inter alia*, of importance to the scientific work of the WCPFC and so have been included in the description of observer data management and data summaries presented in this paper.
5. SPC-OFP has also been provided with a significant amount of data generated from E-Monitoring initiatives undertaken by several Pacific Island countries in recent years. These data are aligned to the ROP minimum data standards but are considered as a different data source to data collected by human observers, which is consistent with the philosophy of WCPFC Project 93 (FFA, PNAO, SPC and WCPFC Secretariat, 2019); there has also been a recent initiative to produce independent draft minimum EM data field standards in Pacific Island countries (SPC, FFA and PNAO, 2020). A breakdown of data generated from E-Monitoring initiatives has been included in this paper.
6. This paper serves to provide an update on the status of ROP data management at SPC-OFP over the past twelve months, covering the following:
  - Activities over the past 12 months
  - Status of observer data entry, data provisions, coverage and issues, and;
  - Future expectations.
7. The SC is encouraged to review the information in this paper and provide suggestions for enhancements for future WCPFC meetings, as required.

---

<sup>2</sup> CMM 2018-05 paragraph 5

### **Scope of the Commission ROP**

5. *The Commission ROP shall apply to the following categories of fishing vessels authorized to fish in the Convention Area in accordance with the Commission's Conservation and Management Measures 2004-01:*

- i) *vessels fishing exclusively on the high seas in the Convention Area, and*
- ii) *vessels fishing on the high seas and in waters under the jurisdiction of one or more coastal States and vessels fishing in the waters under the national jurisdiction of two or more coastal States.*

## 2. Activities over the past twelve months

8. The work related to observer data management achieved over the past twelve months includes,
- SPC technical staff continued to provide remote technical support to the observer data entry staff based at the offices of the WCPFC Secretariat. Further progress was made in refining the process for transferring WCPFC ROP data to the WCPFC Secretariat, but there remain some areas to improve the efficiency of the Secretariat receiving observer data in a timely manner.
  - The major developments for the Tufman 2 (Observer component) have now been completed, although there is regular, ongoing maintenance of this system. Enhancements and trials of the E-Reporting system (OLLO) for observers active in the South Pacific albacore longline fishery was one of the features of work for the SPC development team during the past year.
  - SPC technical staff continued to provide regular support to other countries and regional agencies processing observer data using the Tufman 2 observer component.
  - Remote (and some direct) support continued to be provided to Fiji, RMI and FSM to assist with quality control of data generated from E-Monitoring systems and assistance on the use of DORADO reports, which summarise EM data and provide comparisons of EM data to other types of data (logbook, onboard observer and port sampling data).
  - The most time-consuming work over the past year for the observer technical staff continued to be the update of data loaders for the non-standard<sup>3</sup> observer data provided by several CCMs for their national observer programme data. Over the past year, non-standard longline observer data have been provided for the following fleets/years: Australia (2019; E-Monitoring data), China (2019), Japan (2019), New Zealand (2019), EU (2019), US (Hawaii/American Samoa 2019), Korea (2019), Chinese Taipei (some 2019 data) and Vietnam (2019). Most of the non-standard observer data have now been loaded, although some data have issues which require manual intervention and/or referral to the original source of the data (and has proved very time consuming). However, as noted in this paper last year, several countries providing non-standard observer data are using the WCPFC E-reporting observer data field standards<sup>4</sup> to submit their observer data, which significantly reduces the time taken to load the observer data provided by these countries.
  - The online web-based Observer (DORADO) database-reporting module continues to be enhanced and used regularly by national observer providers, the WCPFC and FFA Secretariats and several other CCMs. This system continues to be used by Pacific Island countries in preparation of the WCPFC Part 1 and Part 2 reports for submission, and the system will continue to expand and evolve over the coming years to meet the requirements of not only national observer programmes, but also SPC, the WCPFC Secretariat, FFA and PNAO.

## 3. Status of Observer data entry, data provisions and issues

9. Table 1 shows the status of observer data received and entered by SPC as at 2<sup>th</sup> July 2020 and Table 2 provides an indication of the available purse-seine observer data processed by fleet. Table 3 shows the coverage of Regional Observer Programme (ROP) longline activity for 2018 as nominated by the flag state and according to the metrics proposed at TCC10<sup>5</sup> and agreed at WCPFC11<sup>6</sup>, and Table 4 shows the coverage of Regional Observer Programme (ROP) longline activity for 2019, as nominated by the flag state. Tables 3 and 4 also provide an indication of the longline Regional Observer Programme (ROP) data submitted to WCPFC/SPC by year and fleet, and the coverage of the data provided; this allows a comparison to the coverage nominated by the flag state and is used to evaluate compliance in achieving the required ROP longline coverage of 5%. Tables 5 and 6 provide an indication of both ROP and non-ROP (i.e. total observer) data provided to SPC with an estimated total observer data coverage relevant to the scientific work of the WCPFC.

---

<sup>3</sup> We refer to “non-standard” as observer data that are not entered using the Tufman 2 system, or do not align to the WCPFC ER observer data field standards (i.e. they are provided in different formats by CCMs which requires the development of specific data loaders)

<sup>4</sup> [https://www.wcpfc.int/doc/data-05/e-reporting\\_ssps](https://www.wcpfc.int/doc/data-05/e-reporting_ssps)

<sup>5</sup> See the TCC10 paper at <http://www.wcpfc.int/node/19567>

<sup>6</sup> See the WCPFC11 report at <http://www.wcpfc.int/node/20349>, para 477 and Attachment L, Table 1

10. Pacific Island observers and programmes generate most of the observer data used by the Commission and Table 7 provides an indication of the extent of data generated in recent years. There has also been a significant amount of data generated from E-Monitoring over the past 2-3 years, and an attempt to quantify these data has been made in Table 8.

11. As noted in this paper in previous years, the summaries of observer data provisions presented herein continue to be constrained by a number of factors [see Williams et al. (2017) for the details of each factor], including:

- i. Accurate information on the complete number of vessel trips by gear and flag in the WCPFC Convention Area.
- ii. Accurate information on the actual number of observer trips by observer programme, gear and flag.
- iii. Assignment of an ROP trip in the unprocessed data.

### 3.1 Purse seine

12. Provisions of purse seine observer data for years 2012–2018 have been described in previous versions of this paper.

13. Observer data for an estimated 62% (1490 trips out of 2,386 trips according to VMS data) of observer purse seine trips conducted during 2019 have been received at SPC at the time of writing this paper (the data received represents 79% of the trips with known observer placements in 2019). This is in line with the 2018 data provision and a significant improvement on the provision of 2017 data at this stage, when the coverage was only 28%. The current coverage of 2017 observer data received at SPC is now an estimated 82% (1,782 trips) of the total estimated purse seine trips (2,165 trips according to 2017 VMS data), with a coverage of 95% for trips with known placements.

14. A total of 87% (1,268 trips) of the observer data received (1,490 trips) at SPC for 2019 observer activities have now been entered (excluding the trips awaiting resolution at SPC). SPC employs a strategy of processing the most recent observer data (in this case 2019 data) as highest priority, mainly to ensure CCMs can satisfy their Part 1 and Part 2 reporting obligations (for which compliance applies to the most recent year). This is reflected in the “**% of trips received without problems**” in **CATEGORY 5** of Table 1 whereby the outstanding data entry for 2019 (for example) had a higher priority than the outstanding trips to be entered in earlier years, and therefore a higher proportion in this column. The outstanding trips for earlier years will be entered once the current priority for 2019 data entry has been achieved (i.e. resolving the outstanding issues in trip data already received and working with observer programmes in regards to the submission of trips not yet received). For the 2019 purse seine trips received at SPC, about 2% (31 trips) have problems awaiting to be resolved (mainly issues with scanning or incomplete data submitted), but a significant improvement on previous years, nonetheless.

15. The breakdown of processed purse-seine observer data by fleet (Table 2) shows that the coverage of 2019 observer data submitted to SPC is generally high, with respect to observer data with known placements. The observer data for Ecuador and El Salvador fleets are anticipated (these trips are usually conducted as IATTC cross-endorsed trips and there is a delay for the data to flow back to the observer provider and then on to SPC).

16. Figure 1 highlights the continuation in the timely provision of 2019 purse seine observer data compared with the provision of 2017 data (when there were considerable lags in data provisions). The best way to interpret these graphs is to understand that having more trips (blue bars) to the left of the red line represents the more timely provision of observer data, but having more trips (blue bars) to the right of the red line means progressive lags in the provision of data. The timely provision of 2018 and 2019 observer data has meant that more data for the most recent calendar year were available for the scientific work required for SC16 than in recent years.

17. As reported in previous years, the ‘problematic’ trip data held at SPC awaiting resolution are mainly due to incomplete or poor-quality scanned data submissions.

18. It is important that the observer trip data rejected by the observer programmes still be submitted to ensure all observer trip data are available, and that the problems encountered can be reviewed and referred to in future training, debriefing and data quality control procedures. Information on the trips “with unknown status” will require follow-up with flag and observer service providers, in the absence of any observer trip reporting obligations. Provision of a list of ALL observer trips conducted by each observer service provider on a regular basis would enhance the summary reports presented in this paper. The lack of provision of ‘observer placement lists’ from most national observer programmes remains a major issue.

19. We also highlight the importance of observer service providers submitting debriefing evaluations/scores to allow the assignment of appropriate data quality indicators to the data. In the future, we plan to work with observer providers to resolve the backlog of observer debriefing data and incorporate debriefing data from the PNA FIMS observer-debriefing component into the regional observer database. We anticipate reporting summaries from the observer debriefing data in future versions of this paper.

20. Figure 2 provides an indication of the spatial coverage of the purse seine observer data for 2019, noting that the domestic fisheries of Indonesia, Philippines and Vietnam are not shown (although the Philippines purse seine fleet observer effort in the high seas pocket #1 is shown). The spatial coverage of available purse seine observer data for 2019 in the tropical fishery is clearly representative of fishing effort (even though coverage of available observer data is not yet 100%).

### 3.2 Longline

21. SC11 directed SPC to present a table of longline ROP coverage which included both the coverage reported by each CCM for their longline fleet and the coverage of that fleet according to data provided to the WCPFC; Tables 3 and 4 have been prepared in response to this recommendation for longline ROP coverage for 2018 and 2019 respectively.

22. Previous versions of these tables included the trips for fleets that are restricted to the home EEZ/adjacent high seas only (which are defined as non-ROP). The 15<sup>th</sup> WCPFC Scientific Committee (SC15), held in Pohnpei, FSM in August 2019, recommended that future versions of Tables 3 and 4 exclude the non-ROP defined data and only report on ROP longline coverage – this recommendation has been actioned with adjustments to Tables 3 and 4 in this paper.

23. In addition to the adjustments for Tables 3 and 4, two new tables have been added (Tables 5 and 6) which provide a breakdown of all longline observer data (ROP and non-ROP) provided to the WCPFC Science Service Provider for Commission work, covering 2018 and 2019 respectively. These tables use the common longline effort metric (hooks) and indicate that overall coverage was 4.9% and 4.6% (respectively for 2018 and 2019) according to data provisions to date.

24. The positive development with some CCMs providing data aligned to the WCPFC ER observer data standards has improved the timeliness of loading the ‘non-standard’ observer data, although some provisions of data for the most recent calendar year (2019) have only recently been provided and were too late for inclusion in analyses undertaken for SC16. For example, the 2019 Japan observer data were provided at the time of completing this paper and have yet to be loaded but have been accounted for in Table 6.

25. Figures 3 and 4 provides an indication of the spatial coverage of all longline observer data (ROP and non-ROP) provided for 2018 and 2019, respectively. Spatial coverage of longline observer data has improved during the past 2–3 years compared to previous years.

### 4.3 Contribution of Pacific Island observer programmes

26. Table 7 provides a breakdown of observer data collected by each Pacific Island (PIC) observer programme for 2018 and 2019. For purse seine, the PIC observer data currently cover 99.8% of the tropical WCPFC fishery (based on total tuna catch estimates for the tropical fishery) for 2018, and 75.9% for 2019. For longline, the PIC observer data currently covers 1.46% and 1.20%, respectively for 2018 and 2019, based on total WCPFC tuna catch estimates.

#### 4. Summary and Future expectations

27. There are several observer data entry teams<sup>7</sup> operating throughout the region entering data into the Tufman 2 observer component. This system is primarily supported by the two technical positions (Observer Data Manager and Observer Data Audit Officer) based in SPC Noumea, but also by other SPC-OFP staff who will continue to assist member countries using this system via the SLACK Helpdesk.

28. The continued improvement in the timeliness of purse seine observer data over the past two years (see Figure 1 and Section 3.1, para. 16 above) is encouraging and we thank all observer providers for their work in ensuring data have been provided in a timelier manner.

29. SPC-OFP will continue to be involved in observer E-Reporting and E-Monitoring trials in collaboration with their member countries and other regional agencies in the coming years, if and when national fisheries authorities are adequately resourced and prepared to venture down this path. SPC will also continue to collaborate with other E-Reporting projects involving observer data, as required.

30. SPC-OFP will continue to work closely with the WCPFC Secretariat over the coming year on the following areas:

- Provide ongoing support to enhance the WCPFC ROP database to align with the requirements of the WCPFC Compliance Case system;
- Continued support for the WCPFC/NORMA observer data entry (using the Tufman 2 web-based system);
- Continued support (technical and training) related to the web DORADO observer reporting tool;
- Continued support in responding to requests to disseminate ROP data according to the WCPFC data dissemination rules;
- Continued work in satisfying WCPFC requirements for ROP data reports mainly aligned to their requirements for CMM monitoring.

31. SPC-OFP will also continue to work with the Pacific Islands Forum Fisheries Agency (FFA) and the PNA office to improve efficiencies in observer data management and dissemination (according to established data sharing rules), particularly in regards to data flow and reporting tools for the benefit of SPC-OFP/FFA/PNA member countries.

---

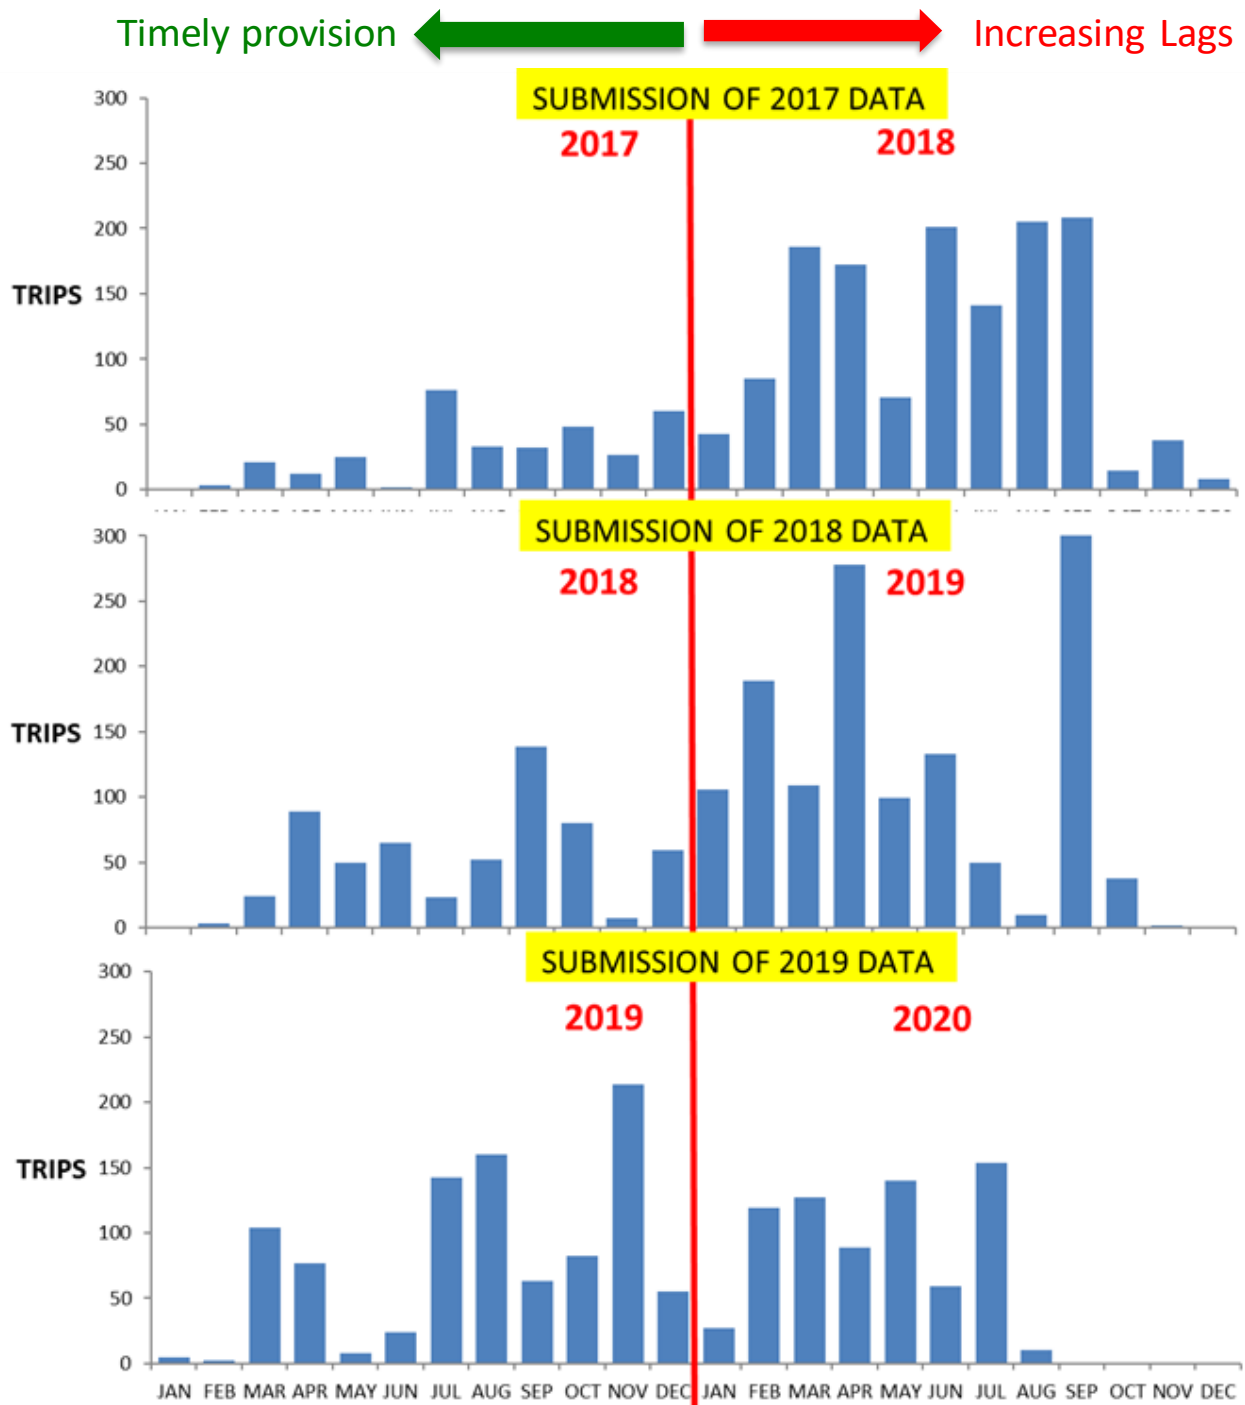

<sup>7</sup> SPC Noumea, WCPFC Secretariat, FFA, Philippines, Fiji Fisheries and Tonga are undertaking observer data entry.

## FIGURES

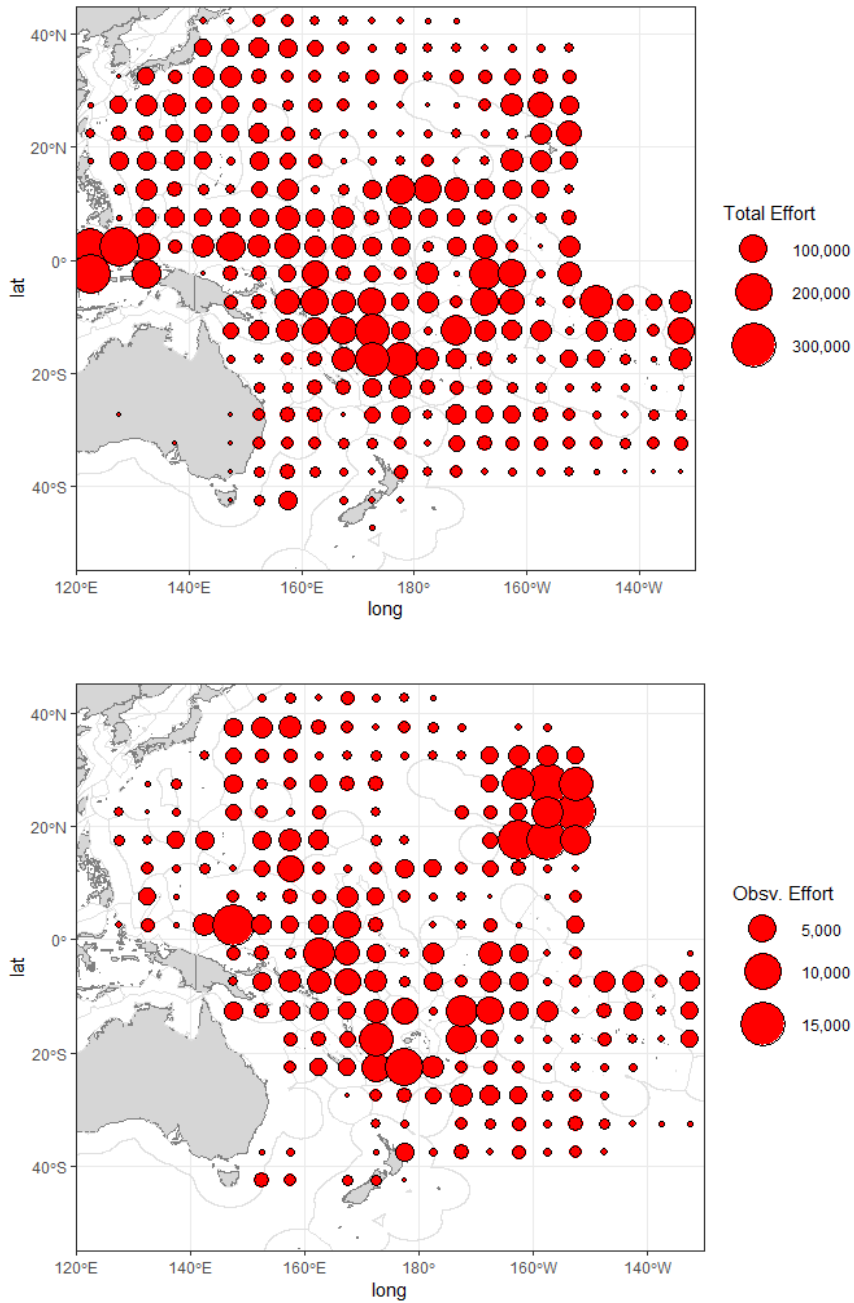

**Figure 1. Monthly frequency of provision of 2017 (top), 2018 (middle) and 2019 (bottom) purse seine observer data**

X-Axis represents the year/month when respective observer data were received. For example, the top graph represents when provisions of 2017 observer data were received at SPC throughout the months of 2017–2018. Provisions of data to the left of the red line indicate timely provisions, provisions to the right indicate increasing lags.

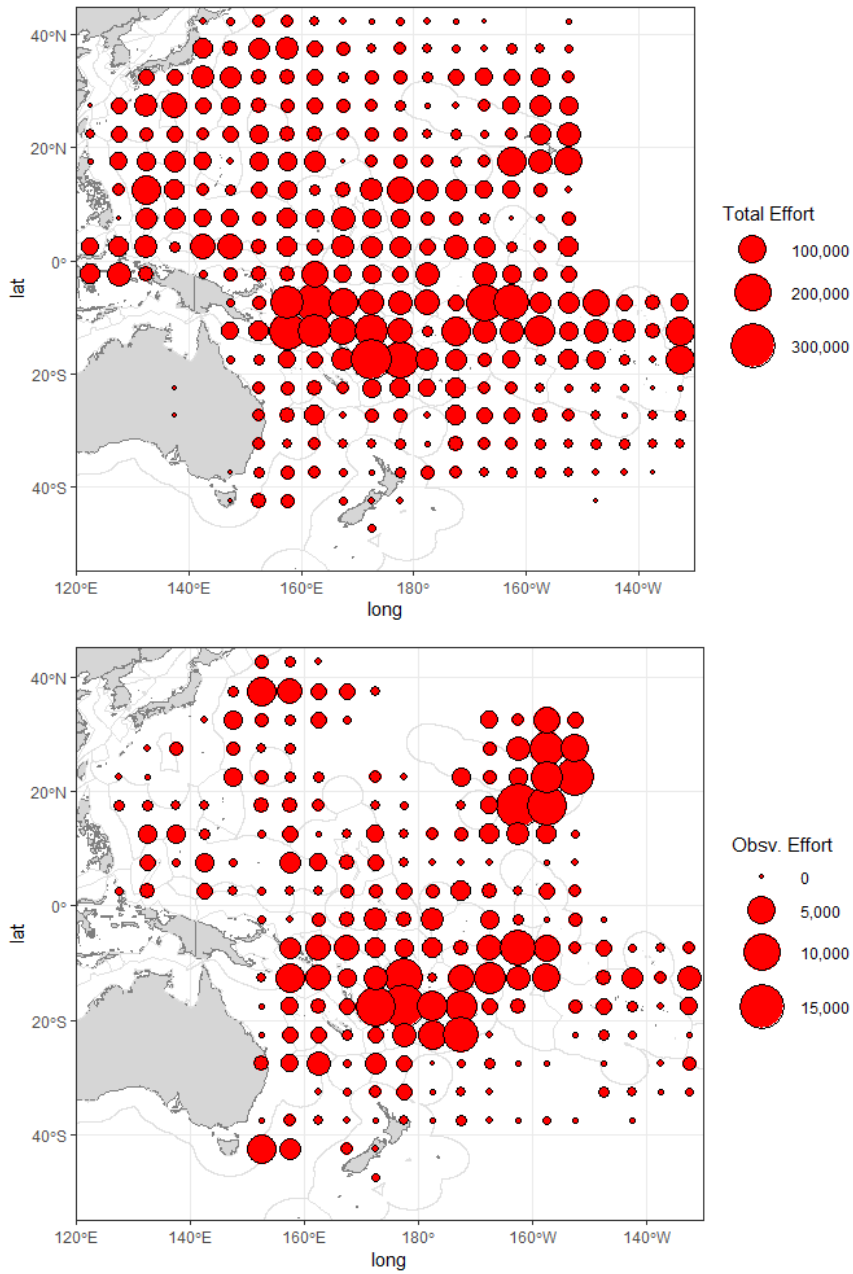

**Figure 2. Distribution of Purse seine effort (top) and Observer coverage (bottom) in the WCPFC Area for 2019. Effort is in DAYS fishing and searching. (excludes Indonesia, Philippines and Vietnam domestic fisheries)**

**Figure 3. Distribution of Longline effort (top) and Observer coverage (bottom) in the WCPFC Area for 2018. (Effort is in 100s of hooks)**

**Figure 4. Distribution of Longline effort (top) and Observer coverage (bottom) in the WCPFC Area for 2019. (Effort is in 100s of hooks; 2019 data are provisional)**

### Notes

- CATEGORY 1** represents estimated trips determined from VMS data. These trips exclude the Philippines and Indonesian domestic fisheries, purse seine trips undertaken completely outside the tropical waters (20°N-20°S). In some instances, trips identified in the VMS data where no fishing actually took place (e.g. returning to home port in Asia for annual maintenance) may have been included in the “Estimated” trips and so the values in this column will be an over-estimate of actual fishing trips.
- CATEGORY 2** represents trips of unknown status and is essentially the difference between VMS trips (**CATEGORY 1**) and those trips that SPC has a record of having taken place (**CATEGORY 3**). In some instances, trips identified in the VMS data where no fishing actually took place (e.g. returning to home port in Asia for annual maintenance) may have been included in the “Estimated” trips. This category may also include fishing trips without an observer on-board.
- CATEGORY 3** covers (i) data received at SPC and (ii) basic trip information provided by observer programmes indicating an observer trip took place, but data have yet to be provided.
- SPC employs a strategy of processing the most recent observer data as highest priority, mainly to ensure CCMs can satisfy their Part 1 and Part 2 reporting obligations (for which compliance applies to the most recent year). This is reflected in the “% of trips received without problems” in **CATEGORY 5** whereby the outstanding data entry for 2018/2019 has higher priority than outstanding trips data entry in 2016/2017, for example. Every effort has been made to resolve the backlog from previous years.
- CATEGORY 7** is essentially the difference between **CATEGORY 3** and **CATEGORY 4**.
- Observer data from the Philippines fleet fishing in the High Seas Pocket #1 (HSP #1) are included in this table.

**Table 2. Summary of Purse seine Observer data received at SPC, by year and flag**

**Table 2. Summary of Purse seine Observer data received at SPC, by year and flag (continued)****Notes**

1. **CATGEORY 1** represents estimated trips determined from VMS data. These trips exclude the Philippines and Indonesian domestic fisheries, purse seine trips undertaken completely outside the tropical waters (20°N-20°S). In some instances, trips identified in the VMS data where no fishing actually took place (e.g. returning to home port in Asia for annual maintenance) may have been included in the “Estimated” trips.
2. **CATEGORY 2** represents trips of unknown status and is essentially the difference between VMS trips (**CATEGORY 1**) and those trips that SPC has a record of having taken place (**CATGEORY 3**). In some instances, trips identified in the VMS data where no fishing actually took place (e.g. returning to home port in Asia for annual maintenance) may have been included in the “Estimated” trips. This category may also include fishing trips without an observer on-board.
3. **CATEGORY 3** covers (i) data received at SPC and (ii) basic trip information provided by observer programmes indicating an observer trip took place, but data have yet to be provided.
4. Observer data from the Philippines fleet fishing in the High Seas Pocket #1 (HSP #1) are included in this table.

**Table 3. Provisional 2018 Longline Regional Observer Programme (ROP) coverage by CCM – based on reporting from CCMs and data submissions**  
 The fleet breakdown, metric and reporting by CCMs is based on WCPFC11 Summary Report para 483-486 and Attachment L (Anon., 2010a). Flag CCM reporting is from Annual Report Part 1.

## NOTES

1. The fleet breakdown, metric and reporting by CCMs is based on WCPFC11 Summary Report para 483-486 and Attachment L (Anon., 2010a). Flag CCM reporting includes information from Annual Reports - Part 1.
2. Domestic fleet fishing within their EEZ. There is no fishing in other EEZs but there may be very infrequent activities in adjacent high seas area. The activities of this fleet are therefore not relevant to the requirements for ROP longline coverage.
3. China has advised in their Annual Report Part 1 that their choice of metric is “days-at-sea”. Total estimated effort (of days at sea) is determined from available operational logbook data, raised to account for incomplete coverage (of operational logbook data provided).
4. In a communication of 28 February 2015, EU advised that they will use “NUMBER OF TRIPS” for measuring and reporting observer coverage on its flagged LL vessels for years from 2014. For 2013, they had previously advised that “*We are currently exploring options for improving observer coverage on EU LLs. Recent amendments in the ES legislation should contribute also in improving these aspects. At TCC10, EU advised that legislation has been adopted.*”
5. No information provided by the CCM for this fleet.
6. The information provided for the US fleets EXCLUDES activities in their respective EEZs, that is, the coverage rates provided are for their ROP trips only and estimated effort is for activities outside their EEZ.
7. The information provided for these fleets EXCLUDES activities of the domestic component (i.e. vessels fishing exclusively in the home EEZ and adjacent high seas only); the coverage represents the component that conduct ROP-defined trips only.
8. Most (if not all) vessel trips (and therefore most days-at-sea) would be non-ROP trips since mostly restricted to waters of national jurisdiction. . Observer coverage is for all activities (ROP and non-ROP) of the domestic fleet.
9. Observer trip value represents the trip data provided to SPC in the absence of advice from this CCM on total number of observer trips conducted. This value may not represent the overall trips undertaken (i.e. it may be an under-estimate).
10. All vessel trips (and therefore days-at-sea) would be defined as ROP trips. “Distant-water” vessels have very long trips and since some fleets tranship at sea, the unit of coverage might more suitably be “days-at-sea” for these situations.
11. Covers both ‘fleets’ as coverage cannot be split by fleet at this stage.
12. Tuvalu advised their choice of metric was “Number of Trips”.
13. Observer coverage information (as nominated from flag state) was taken from the CCMs WCPFC Annual Report Part 1 prepared for SC14 (as per WCPFC11 Summary Report paragraphs 483 – 486).
14. Includes observer trips conducted by Coastal state observer programmes on Chinese Taipei-flagged STLL vessels.
15. This CCM did not have flagged longline vessels on the Record of Fishing Vessels in 2018.
16. No longline vessels from Philippines active in 2018.
17. Australia commenced producing data from their E-Monitoring system from 2015. E-Monitoring data are not yet considered to count towards ROP coverage.
18. Japan provided trip-level details for 2018 observer activities including trip monitoring information.
19. Observer data provided does not satisfy all of the ROP minimum data field standards.
20. There is evidence that additional observer trips have been conducted by coastal states, but the data have yet to be provided.
21. The number of total trips for the Indonesian domestic longline fleet is not known but has been estimated based on the annual catch estimate and approximate catch per trip.
22. 2018 observer data provided for the China longline fleet included some activity in the Pacific Ocean beyond the WCPFC Area; these data have been excluded in the coverage rates presented in this table.
23. Effort metric for Korean longline fleet in 2018 is DAYS AT SEA.
24. No activity in 2018 by this CCM’s longline fleet.
25. Represents the chartered vessels in this fleet; no vessels were flagged to RMI in 2018.

**Table 4. Provisional 2019 Longline Regional Observer Programme (ROP) coverage by CCM – based on reporting from CCMs and data submissions**  
 The fleet breakdown, metric and reporting by CCMs is based on WCPFC11 Summary Report para 483-486 and Attachment L (Anon., 2010a). Flag CCM reporting is from Annual Report Part 1.

## NOTES

1. The fleet breakdown, metric and reporting by CCMs is based on WCPFC11 Summary Report para 483-486 and Attachment L (Anon., 2010a). Flag CCM reporting includes information from Annual Reports - Part 1.
2. Domestic fleet fishing within their EEZ. There is no fishing in other EEZs but there may be very infrequent activities in adjacent high seas area. The activities of this fleet are therefore not relevant to the requirements for ROP longline coverage.
3. China has advised in their Annual Report Part 1 that their choice of metric is “days-at-sea”. Total estimated effort (of days at sea) is determined from available operational logbook data, raised to account for incomplete coverage (of operational logbook data provided).
4. In a communication of 28 February 2015, EU advised that they will use “NUMBER OF TRIPS” for measuring and reporting observer coverage on its flagged LL vessels for years from 2014. For 2013, they had previously advised that “*We are currently exploring options for improving observer coverage on EU LLs. Recent amendments in the ES legislation should contribute also in improving these aspects. At TCC10, EU advised that legislation has been adopted.*”
5. No information provided by the CCM for this fleet.
6. The information provided for the US fleets EXCLUDES activities in their respective EEZs, that is, the coverage rates provided are for their ROP trips only and estimated effort is for activities outside their EEZ.
7. The information provided for these fleets EXCLUDES activities of the domestic component (i.e. vessels fishing exclusively in the home EEZ and adjacent high seas only); the coverage represents the component that conduct ROP-defined trips only.
8. Most (if not all) vessel trips (and therefore most days-at-sea) would be non-ROP trips since mostly restricted to waters of national jurisdiction. . Observer coverage is for all activities (ROP and non-ROP) of the domestic fleet.
9. Observer trip value represents the trip data provided to SPC in the absence of advice from this CCM on total number of observer trips conducted. This value may not represent the overall trips undertaken (i.e. it may be an under-estimate).
10. All vessel trips (and therefore days-at-sea) would be defined as ROP trips. “Distant-water” vessels have very long trips and since some fleets tranship at sea, the unit of coverage might more suitably be “days-at-sea” for these situations.
11. Covers both ‘fleets’ as coverage cannot be split by fleet at this stage.
12. Tuvalu advised their choice of metric was “Number of Trips”.
13. Observer coverage information (as nominated from flag state) was taken from the CCMs WCPFC Annual Report Part 1 prepared for SC14 (as per WCPFC11 Summary Report paragraphs 483 – 486).
14. Includes observer trips conducted by Coastal state observer programmes on Chinese Taipei-flagged STLL vessels.
15. This CCM did not have flagged longline vessels on the Record of Fishing Vessels in 2019.
16. No longline vessels from Philippines active in 2019.
17. Australia commenced producing data from their E-Monitoring system from 2015. E-Monitoring data are not yet considered to count towards ROP coverage.
18. Japan provided trip-level details for 2019 observer activities including trip monitoring information.
19. Observer data provided does not satisfy all of the ROP minimum data field standards.
20. There is evidence that additional observer trips have been conducted by coastal states, but the data have yet to be provided.
21. The number of total trips for the Indonesian domestic longline fleet is not known but has been estimated based on the annual catch estimate and approximate catch per trip.
22. 2019 observer data provided for the China longline fleet included some activity in the Pacific Ocean beyond the WCPFC Area; these data have been excluded in the coverage rates presented in this table.
23. Effort metric for Korean longline fleet in 2019 is DAYS AT SEA.
24. No activity in 2019 by this CCM’s longline fleet.
25. Represents the chartered vessels in this fleet; no vessels were flagged to RMI in 2019.
26. Excludes trips/activities from chartered vessels and also non-fishing trips.
27. The information provided for these fleets EXCLUDES activities of either domestically-based (in home EEZ) or locally-based components of this fleet; that is, vessels from this fleet that fish exclusively in one Pacific Island EEZ and adjacent high seas only are not included (i.e. considered non-ROP trips); the coverage represents the component that conduct ROP-defined trips only.

**Table 5. Coverage of Longline Observer data in the WCPFC Area, for 2018**

(all observer data available to the WCPFC Science Service Provider; includes both ROP and non-ROP data)

**Notes**

1. Cov% represents coverage in the tropical WCPFC purse seine fishery using total target tuna catch estimate as the metric.
2. Cov% represents coverage in the WCPFC longline fishery using total target tuna catch estimate as the metric.
3. Trips represent observer trips conducted by the observer programme. This metric is not used in the estimate of coverage (see notes 1. and 2. above).
4. Represents data received at SPC, including some data not yet to be processed.
