SUMMARY

FSM Fisheries are targeting the skipjack tuna (*Katsuwonus pelamis*), yellowfin (*Thunnus albacares*), bigeye tuna (*T. obesus*) and albacore tuna (*T. alalunga*).

In 2024, the total provisional annual catch estimate by FSM National Fleets in the Western and Central Pacific Commission Conventional Area (WCPFC-CA) is 196,046 metric tons (mt) of tuna target tuna. The total provisional catch report for targeted tuna has increased from 151,301 mt in 2023 to 196,046 mt in 2024.

FSM purse seiners increased its catch of the key tuna species in the WCPFC-CA from 151,301 mt in 2023 to 188,475 mt in 2024 (Table 1). The FSM longliners has its catch in the WCPFC-CA continued to be increased from 4,348 mt in 2023 to 7,571 mt in 2024 (Table 2).

Based on provisional data from logsheets, the total 2024 provisional annual catch estimates in the FSM Economic Exclusive Zone (EEZ), both foreign and domestic fleet and by gears, accumulated to a total of 289,269 mt of target tuna. The 2024 catch is a large increase in catch in comparison with the 5-year trend series, 2020-2024. The catch record in the FSM EEZ by purse seine, longline, and pole-and-line in 2024 were 279,547 mt, 5,160 mt and 4,562 mt, respectively.

BACKGROUND

The FSM EEZ is situated between 135° and 165° east longitude and 10°N and 5°S latitude. Covering an area over one million square miles of the Western and Central Pacific Ocean (WCPO). FSM is the third largest EEZ among the Pacific Island members of the Forum Fisheries Agency (FFA).

FSM NORMA's mandate is to be an effective guardian and manager of the living and non-living resources in the FSM EEZ for people living today and for the generations to come.

As of 2024, FSM has fully resumed observer operations on purse seine and longline fishing vessels. FSM continues to grow its observer program through recruitment with the support of SPC and FFA, while also ensuring that current observers are refreshed and able to carry out their duties.

FLAG STATE REPORTING

The number of FSM fishing vessels by gear in 2024 comprised of 26 purse seiners and 33 longline vessels as indicated in Table 3 and Table 4. These vessels fished actively throughout the WCPO. However, FSM fresh longline fish for fresh yellowfin and bigeye tuna in Majuro while a few of FSM chartered frozen longline vessels seasonally fish for albacore tuna in the waters of Cook Islands (Figure 2).

In 2024, the catch of FSM purse seine in the WCPFC-CA is accounted for (188,475 mt - 96%) of the total catch followed by (7,571 mt - 4%) of the FSM longline.

Skipjack (168,414 mt) is accounted for 86% of the total catch followed by yellowfin 16,980 mt (-9%), then bigeye (3,064 mt - 2%) and albacore (0.08 mt - >1%). In addition to the total provisional 2024 WCPO catch, black marlin, blue marlin, striped marlin, silky shark were other species that were retained and discarded.

The 2024 total provisional catches reported from logsheets retained and discarded totaled 196,046 mt and 2,127 mt, respectively.

For the National purse seine, the total provisional 2024 WCPO-CA catch retained and discarded totaled 188,475 mt and 908 mt, respectively.

As for the National longlines, the total retained and discarded from the provisional 2024 WCPO-CA catch are 7,571 mt and 1,219 mt, respectively.

COASTAL STATE REPORTING

A total of 155 foreign vessels were licensed to fish in FSM EEZ in 2024. By gear, 43 longliners, 20 pole-and-lines, and 94 purse seiners (Table 5).

The total provisional 2024 purse seine catch in FSM EEZ for skipjack, yellowfin, bigeye and albacore are estimated at 264,546 mt, 12,981 mt, 2,020 mt, and 0, respectively. The purse seine skipjack, yellowfin, bigeye and albacore are accounted for 94%, 5%, 1% and 0% of total catch, respectively (Table 6 and Table 7).

In Table 8 and Table 9, there are no catch recorded for skipjack for longlines. However, the total provisional 2024 longline catch for yellowfin (2,423 mt – 47%) followed by bigeye (2,477 mt – 48 %) then albacore (259 mt – 5%).

In 2024, Japan was the only country that had a pole-and-line fleet operated in the FSM EEZ. However, from 2020 – 2024, Solomon Island Pole and Line fleet also fished in FSM EEZ (Table 10). In 2024, Japan pole-and-line efforts were concentrated in central west and east FSM EEZ. (Figure 5). The catch of pole-and-line in the FSM EEZ has increased from 389 mt in 2023 to 4562 mt in 2024.

FUTURE PROSPECT OF FISHERY

The FSM Observer Program looks forward to continuing to make improvements to the national observer program through training that includes sea safety, biological sampling, port sampling, transshipment monitoring, e-reporting (ER), e-monitoring (EM) and refreshers. To further strengthen the FSM Observer Program, FSM has recruited and began training new observers. This will serve to increase the program's human capacity, meet observer placement demands and ongoing operations in port.

One goal for the coming year is the FSM Observer Program's transition from paper based to electronic reporting, notably in e-obs. In 2024, the FSM Observer Program did 10 ER trips, accounting for 14% of all purse seine trips. This effort calls for strong collaboration among observers, bilateral and domestic partners, and all service providers that will be involved in the transition phase, noting that collaboration will be a critical part of the program's success.

Another goal of the FSM Observer Program will be to continue to progress the Technology for Tuna Transparency (T-3 Challenge). In 2024, the FSM EM Program received equipment from the Australian government through the Australian Fisheries Management Authority, a collaboration to strengthen FSM's capacity in electronic monitoring and fisheries surveillance. FSM is also in the process of finalizing EM regulations for promulgation. While EM is progressing at the national level, FSM is also mindful of the developments at the regional level and will continue to work closely with regional partners and members to progress the regional EM work.

Building capacity in ER and EM will be critical in effective monitoring and data collection, therefore, the FSM Observer Program will continue to work closely with regional partners to ensure the work in ER and EM is further progressed.

CMM 2018-03 [Seabirds] Para 13	<ul style="list-style-type: none">See Table x, Table y and Table z																																																

CMM 2018-03: [Seabirds] Annex 2. Guidelines for reporting templates for Part 1 report

The following tables should be included in the annual Part 1 country reports, summarising the most recent five years.

Table x: Effort, observed and estimated seabird captures by fishing year for [CCM] [South of 30°S; 25°S-30°S; North of 23°N; or 23°N – 25°S¹]. For each year, the table gives the total number of hooks; the number of observed hooks; observer coverage (the percentage of hooks that were observed); the number of observed captures (both dead and alive); and the capture rate (captures per thousand hooks).

Year	Fishing effort				Observed seabird captures		Area
	Number of vessels	Number of hooks	Observed hooks	% hooks observed	Number	Rate ²	
2020	77	31 297 207	914 209	2.9	0	0	25S to 23N
2021	76	22 882 623	116 285	0.5	0	0	25S to 23N
2022	36	15 180 211	116 959	0.8	0	0	25S to 23N
2023	28	16 295 998	626 568	3.8	0	0	25S to 23N
2024	33	21 192 745	1 146 553	5.4	12	0.01	25S to 23N

1 Insert ‘North of 23°N’, ‘South of 30°S’, ‘25°S-30°S’ or ‘23°N – 25°S’. For CCMs fishing in all areas, provide separate tables for each area.

2 Provide data as captures per one thousand hooks.

Table y: Proportion of mitigation types¹ used by the fleet in 2024.

	Combination of Mitigation Measures	Proportion of observed effort using mitigation measures					
		South of 30°S	25°S-30°S	25°S to 23°N	North of 23°N		
	No mitigation measures			19%			
Options required south of 25°S	TL + NS						
	TL + WB						
	NS + WB			1%			
	TL + WB + NS						
	HS						
Other options 25°S-30°S	WB						
	TL						
	MOD			46%			
Other options north of 23°N	SS/BC/WB/DSLS						
	SS/BC/WB/(MOD or BDB)						
Provide any other combination of mitigation measures here	NS			5%			
	NS MOD			18%			
	NS WB MOD			5%			
	WB MOD			6%			
	Totals (must equal 100%)			100%			

¹ TL = tori line, NS = night setting, WB = weighted branch lines, SS = side setting, BC = bird curtain, BDB = blue dyed bait, DSLS = deep setting line shooter, MOD = management of offal discharge, HS = hook-shielding device.

Table z: Number of observed seabird captures in FSM longline fisheries, 2024, by species and area.

A total of 12 seabirds were caught by FSM longline vessels in 2024.

Species	South of 30°S	25°S-30°S	North of 23°N	23°N –25°S	Total
PETRELS AND SHEARWATERS	n/a	n/a	n/a	8	8
SHORT-TAILED SHEARWATER	n/a	n/a	n/a	4	4
Total	n/a	n/a	n/a	12	12

SECTION B: ADDITIONAL ANNUAL REPORTING REQUIREMENTS THAT COULD BE INCLUDED IN ANNUAL REPORT PART 1, IF NOT OTHERWISE REPORTED ANNUALLY TO WCPFC

CMM 2006-04 [South West striped Marlin], Para 4	<ul style="list-style-type: none">In 2024, 10 FM vessels reported fishing south of 15°S; however, there was 1 bycatch reported for South West striped marlin. FM-flagged vessels did not target South West striped marlin south of 15°S in 2024.												
CMM 2015-02 [South Pacific Albacore] Para 4	<ul style="list-style-type: none">Addressed through the regular provision of operational catch/effort logsheet data to SPC, who automatically include these data in the WCPFC databases, as per our authorization.												
CMM 2019-03 [North Pacific Albacore], Para 3	<div><table><tr><th>Year</th><th>Fishery</th><th>Vessel Number</th><th>Vessel Days</th><th>Catch (Number)</th><th>Catch (MT)</th></tr><tr><td>2024</td><td>Longline</td><td>27</td><td>3,921</td><td>11,962</td><td>253</td></tr></table></div> <ul style="list-style-type: none">All catches of NPA were caught as bycatch	Year	Fishery	Vessel Number	Vessel Days	Catch (Number)	Catch (MT)	2024	Longline	27	3,921	11,962	253
Year	Fishery	Vessel Number	Vessel Days	Catch (Number)	Catch (MT)								
2024	Longline	27	3,921	11,962	253								
CMM 2023-03 [North Pacific Swordfish], para 4	<ul style="list-style-type: none">No FM vessels reported fishing north of 20°N as per CMM 2023-03 para 4; therefore, this is not applicable.
